# Cyberhaven Data Detection and Response Platform

## Trace Your Data to Protect It like Never Before

Data is in a state of constant change. It originates from one source and flows to another. Existing data security tools lack the context to truly understand data, require manual tuning, and result in too many false positives. These limitations create significant blind spots. Cyberhaven protects data other tools can't see, from threats they can't detect, and across technologies they can't control.

## Data Detection and Response Platform

| Data Loss Prevention | Insider Risk Management | Visibility & Protection for AI |
|---|---|---|

**Linea AI**

| Context | Content |
|---|---|
| Lineage - Identity | Pattern Matching - AI-based Content Inspection |

| Endpoint Agent | Cloud Connectors | Browser Extension |
|---|---|---|

With Linea AI, achieve:

**5x**
faster resolution

**90%**
reduction in incidents requiring additional review

## Top Benefits

### Comprehensive DLP

Stop data leaks across web, cloud, email, AirDrop, USB devices, printing, and AI tools.

### Reduced False Positives

Blend content inspection with context awareness to better understand data risks.

### Faster, Smarter SecOps

Leverage an autonomous AI agent to detect unknown risks and accelerate investigations.

### Improved Detection

Unite the intelligence of user intent, data interactions, and risk-based scoring to surface real risk.

# Core Use Cases

### Data Exfiltration
Prevent sensitive data from leaving by enforcing controls across all major exfiltration channels.

### Insider Risks
Identify high-risk behaviors and take instant, automated actions to stop data loss.

### Accelerate SecOps
Leverage AI to detect risks missed by traditional policies and facilitate rapid responses to incidents.

### Departing Employees
Flag high-risk users and review historical activity to the point and time of data exfiltration.

### M&A Data Risks
Monitor and enforce controls to stop the unauthorized sharing of confidential information.

### Shadow AI
Achieve unprecedented visibility into AI usage and enforce risk-based controls.
