Rapid Code Gen From Product Story

BOOTCAMP & COACHING SERVICE

Use AI & NLP To Build Better Software

How can you accelerate product development with AI?

January 5th, 2024

Zoom. In-person.

Executive Summary

Technology development is a rapidly progressing area with advent of AI. Developers can ask ChatGPT to write code. But that has not yielded any efficiency gain. Because any standard program can have a million functions and it would require a million of ChatGPT responses along with developer cost as is. To really win over this opportunity, you need to leverage the end to end AI capabilities of generating product story which can generate all the prompts in one go.

We provide tools and leadership coaching in product management functions for managing large and complex products with the help of product story hub and AI. We enable text to software AI through structured product stories. An organized and structure product story can spark the whole organization to build a data driven product decisions and analytics.

Product teams have benefited from text to software AI in terms of instant code effort visibility, feature map transparency, zero loss in developer translation, and bulk prompt driven engineering efficiency. We catalyze this functions across product teams and leadership through of train the trainer bootcamp. An ideal bootcamp can be of 1 week which ends with a successful product story. All future upgrades, enhancements and versions can be done by teams through the product story hub.

TOPICS OF THE PROPOSAL

FAST Builder .AI
Cyberium, Inc

About Us

Cyberium, Inc is an AI & lowcode platform. Firstly we provide tools and coaching for framework agnostic FastBuilder. The AI provides for text to software capabilities in every computer language with LLM models like Github copilot or OpenAI code-gen AI. We also provide lowcode backend and frontend builder for rapid app development and deployment.

We are on a mission to elevate products and the product management practices using artificial intelligence tools. We bring a structured collaboration into the gambit of large and complex products. A vast number of teams into a product operations, delivery and management have varying needs. While many of these needs are not clearly spelled out or translated to every other team, the various teams are unaware of the end to end flow and visibility of product and feature lifecycles. It is so because of complexity. And we simplify this using the natural language and AI in forms of story and graphs.

The ultimate measure of effective product management are financials and release velocity. The former is about reaping the benefits of delivering great value while the later is about identifying the future gold mines. And we enable them both through smart product story and consequently AI on it.

Vision

- Demoratize sofwtare development
- Enable the people having ideas to drive the end results
- Empower people to communicate complex ideas through AI led comprehension

Mission

- Enhance product management practice with scientific and measurable tools
- Organize products, through product stories to enable timeless collaboration and innovation
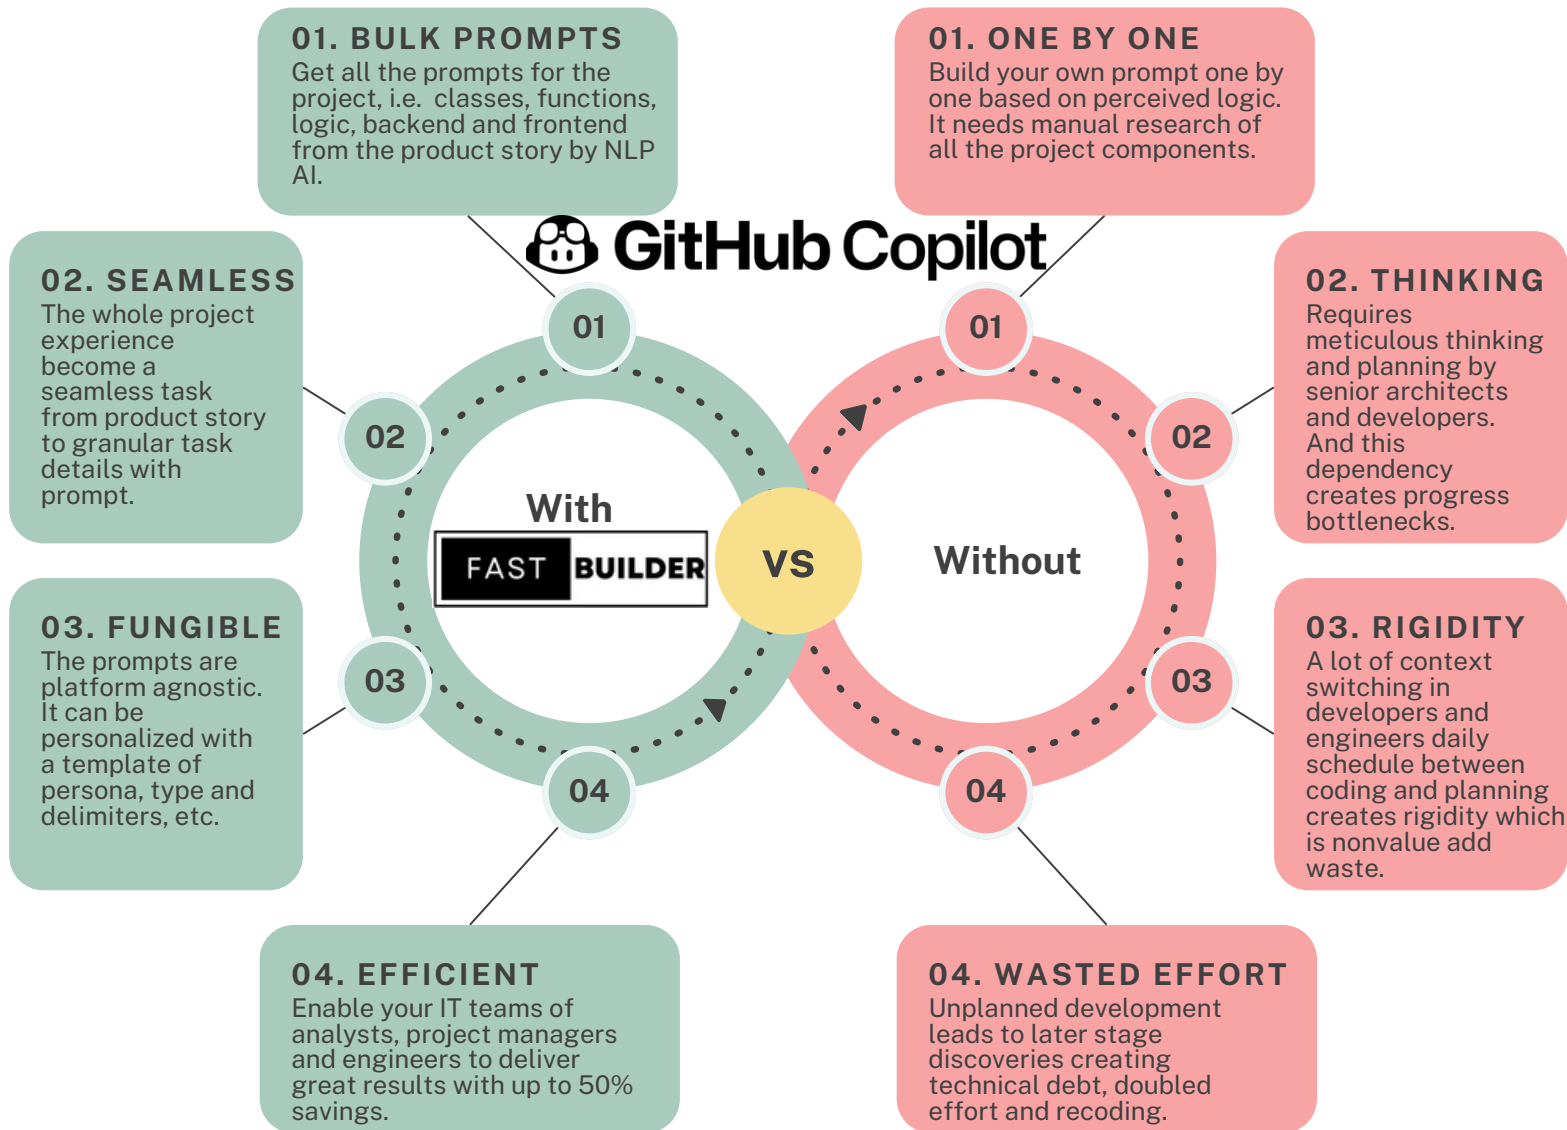

Our Products & Services

FAST Builder .AI
Cyberium, Inc

STORY HUB
Product Story & Collabotaion

Team Platform
Granular project plan & estimations.

Integration Platform
Manage velocity with ease

AGILE

Super Dev Platform
Develop and deploy faster with bulk prompts

01. BULK PROMPTS
Get all the prompts for the project, i.e. classes, functions, logic, backend and frontend from the product story by NLP AI.

01. ONE BY ONE
Build your own prompt one by one based on perceived logic. It needs manual research of all the project components.

GitHub Copilot

02. SEAMLESS
The whole project experience become a seamless task from product story to granular task details with prompt.

02. THINKING
Requires meticulous thinking and planning by senior architects and developers. And this dependency creates progress bottlenecks.

03. FUNGIBLE
The prompts are platform agnostic. It can be personalized with a template of persona, type and delimiters, etc.

03. RIGIDITY
A lot of context switching in developers and engineers daily schedule between coding and planning creates rigidity which is nonvalue add waste.

With FAST BUILDER 01 02 03 04

VS

Without 01 02 03 04

04. EFFICIENT
Enable your IT teams of analysts, project managers and engineers to deliver great results with up to 50% savings.

04. WASTED EFFORT
Unplanned development leads to later stage discoveries creating technical debt, doubled effort and recoding.

Catalyst Coaching

Product management encompasses a wide variety of responsibilities and skills. In addition to operational techniques that drive business growth, product managers must have a deep understanding of financial drivers, experience factors, and engineering capabilities. As a high-value function, product management requires a comprehensive engagement framework that enables collaboration with all executive functions.

As a continuously developing discipline, product management can be effectively guided by a smart product story. This story comprises various parts and is owned by multiple stakeholders and represents the product in its entirety by outlining each feature for every type of user.

Catalyst coaching provides a framework for all stakeholders to acquire and implement effective product story management practices throughout the innovation, creation, alignment, and management of diverse products.

Coach Highlight

To educate participant about smart product story and hands-on coaching.

Invite participants to build a complete product story and discover the benefits.

Make participants aware of the different product perspectives and conflict-free collaboration.

Driving benefits from sales, operations and development.

Bootcamp Format

1 ### Smart Product Story

To educate participant about smart product story and hands-on coaching.

4-6 hours, 10-20 PAX, Activities, Lecture

2 ### Build & Assess Impact

Invite participants to build a complete product story and discover the benefits.

4-6 hours, 10-20 PAX, Activities, Lecture

3 ### Perspectives & Collaboration

Make participants aware of the different product perspectives and conflict-free collaboration.

4-6 hours, 10-20 PAX, Activities, Lecture

4 ### Build & Assess Impact

Driving benefits from sales, operations and development.

1-3 hours, 10-20 PAX, Presentation

5 ### Product Velocity

Establish roles and responsibilities of teams in enabling a higher product velocity of sales, delivery and development.

4-6 hours, 10-20 PAX, Activities, Lecture

Learning Benefits

Smart product stories transforms an organization intrinsically to be more competitive and accelerated in driving value growth for business and customers.

Higher Product Velocities

A product may contain multiple features that exist across different states, namely Active, Sandbox, and Construction. It's possible to enhance the speed of execution and performance in each of these business domains.

Higher Knowledge Retention

A written product story possesses the traits of being shareable, transferable, and transformational. By utilizing a smart framework, it becomes feasible to disseminate and amplify product knowledge while seamlessly collaborating with stakeholders.

Better Product Management

The intelligent product management process relies heavily on data-driven methods rather than subjective evaluations. This approach eliminates uncertainties related to dependencies, priorities, and overall impact.

Bootcamp Packages

Standard

Five Day Bootcamp

Up to 10 PAX

---

4 to 6 hours per day

4th Day board presentation

Target 1 product completeness

Executive Train-The-Trainer

$20,000

Customize

Define your availability and preferences

Up to 100 PAX

Multiple Daily or Evening Sessions

End of session presentation

Multiple dependent products or companies.

For Ops/L&D.
