Main | A software for ATM machine to manage cash stored and disbursement.

Story

As an ATM user, I want to be able to withdraw cash from the machine. To withdraw cash, the user performs the following actions. Inserts their debit or credit card into the card slot. Enters their PIN number using the keypad. Selects the "Withdraw Cash" option on the screen. Enters the amount of cash they wish to withdraw. Confirms the transaction. The system processes the user's request by verifying the PIN number and checking the available balance in the user's account. If the balance is sufficient, the system dispenses the requested amount of cash and updates the user's account balance accordingly. The system also creates a transaction record for the withdrawal, including the date, time, and amount withdrawn. The user receives the requested amount of cash from the machine. The user withdraws cash from the ATM.

Card Authentication | Securing Card Details

Story

A feature that prompts the user to insert or swipe their ATM card into the machine and verifies the card information to prevent identity theft or unauthorized use. The software matches the card data with the details stored in the bank's database.

PIN Verification | Secure User Verification

Story

This prompts the user to input the Personal Identification Number (PIN). The entered PIN is compared with the PIN on record in the bank's database for verification. It

The screenshot displays the FASTBuilder AI project architecture interface. At the top, there are navigation tabs for 'Components', 'Project Architecture', 'S & I', and 'Design'. The 'Project Architecture' tab is active, showing a hierarchical view of the project structure. On the left, a sidebar contains various project management tools like 'Asset & Team', 'Senten Tree', and 'Assets (21)'. The main area is titled 'UI & BE' and contains a grid of UI screens categorized by their screen counts: 'user(16 Screens)', 'amount(0 Screens)', 'datum(7 Screens)', 'feature(7 Screens)', 'balance(0 Screens)', 'patron(5 Screens)', 'manager(9 Screens)', 'cashier(1 Screens)', 'money(1 Screens)', 'redemption(0 Screens)', 'number(0 Screens)', and 'information(2 Screens)'. Below this grid, three preview cards are visible, showing wireframes for a 'My Halle Home Cause' page, a mobile app screen with a 'KILL MORE INFC MEND...' header, and another mobile app screen with a 'Donation of' header.
