

***Thank you for using Knisper to enhance your CyberGate experience!***

## About Cybergate Audio Improved by Knisper

Clear communication can be difficult when using an intercom in noisy environments. The CyberGate Knisper Add-on addresses this challenge by providing an AI-powered audio enhancement tool that significantly improves speech intelligibility and audibility for both intercom users and Microsoft Teams clients.

### What's Included in Your License (per device):

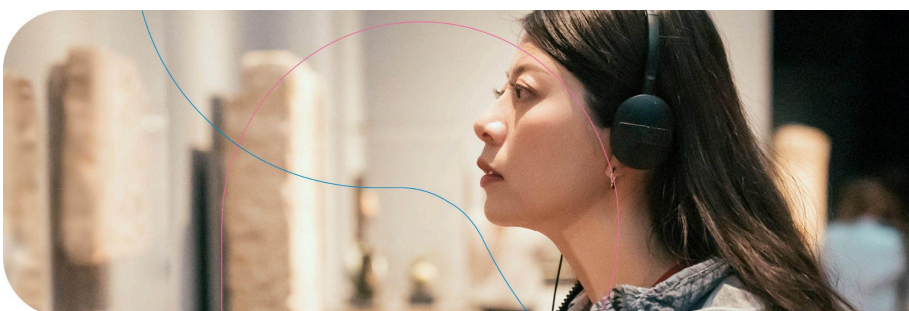

- **AI-Powered Noise Reduction:** Filters out background noise and enhances voice clarity.
- **Optimized for Noisy Environments:** Ensures seamless communication, even in challenging surroundings.
- **Enhanced Hearability:** Makes conversations clearer for all participants.
- **Seamless Integration:** Works directly within Microsoft Teams without additional hardware.
- **Per-Device Licensing:** Each intercom requires its own Knisper Add-on license for optimal performance.

This device-specific license ensures that every intercom in your setup benefits from advanced audio processing, providing clearer communication in high-noise environments such as factories, warehouses, office lobbies, and more.

## About Knisper

Knisper is an AI-driven B2B SaaS solution that optimizes audio quality on any device, improving speech clarity and audibility. In addition to our solution for voice communication through intercoms we also offer a solution for the digital workspace. Our solution Knisper Accessible Workspace Audio improves audibility and speech intelligibility in the (remote) workplace. It works on Microsoft Windows devices and enhances all audio.
