

Cloud-Native Migration Service

cyclotron

Remove or reduce Active Directory.

Cyclotron's Cloud-Native Migration (CNM) service helps you plan and execute the shift from Active Directory to Azure AD. We help you navigate the complexities of migration, ensuring a smooth transition to a more modern, secure, cloud-first infrastructure.

WHAT YOU'LL GET

Reduced attack surface by removing any possibility of on-premises attacks targeted to end-users.

Simpler IT architecture, as all company assets are easily managed using cloud tools.

Removal of VPN so users can use cloud-based tools rather than older, on-premises apps.

Access to the Latest innovations and updates from Microsoft, ensuring your organization stays modern.

Easier feature enablement including Autopilot, Autopatch, Windows Hello for Business that are otherwise difficult to implement in on-prem environments.

Removal/reduction of on-premises datacenters, instead leveraging Azure compute and Azure AD for critical workloads.

Alignment with Zero-Trust principles, including easier implementation of layered security, least-privilege access, and explicit verification of access.

Increased stability, given uptime is now a function of Microsoft's 99.99%+ uptime SLAs for Azure and Microsoft 365 services.
