

# Exchange Online Deployment

cyclotron

**Keep your enterprise  
connected anywhere  
and everywhere.**

In the modern work landscape, organizations must provide employees with the flexibility to send emails from tablets, phones, and laptops while on the go.

By partnering with Cyclotron to deploy Exchange Online, employees can access their email and collaborate on shared mailboxes, calendars, and global address lists using email and calendar clients like Outlook desktop, Outlook on the web, and Outlook mobile app.

WHAT YOU'LL GET

Control of your  
environment

Advanced  
security  
capabilities

Data loss  
prevention  
capabilities

Security across  
devices

Multi-geo  
capabilities in  
Microsoft 365

Guaranteed  
99.9% uptime

## Stay in Control of Your Data with Powerful Administration Tools

Administrators receive operational and management-level reporting to understand how classified, unclassified, and protected data flows across and outside the corporate environment. They can automatically enforce content protections and implement sharing warnings. Administrators can also investigate legal cases and escalate insider risk cases.

## Why Cyclotron for Exchange Online deployment?

Cyclotron provides a complete migration approach to Exchange Online from various sources, including Exchange On-Premises to Exchange Online, M365 tenant to tenant migrations, Google Workspace to M365, GoDaddy to M365, and more. Cyclotron's migration approach is agnostic to the on-premises environment, making enablement possible for both on-premises and cloud-first organizations.
