

Windows 365 Pilot

Rapidly create secure cloud collaboration environment.

Offer highlights

Understand how to take advantage of your Microsoft licensing to minimize your cloud spend.

Unify your security controls to maximize your visibility and auditability for your Windows 365 deployment.

Implement cost management and governance with policies and blueprints to bring standard security to your Azure deployment.

Integrate your existing application delivery landscape with Windows 365.

Windows 365 Pilot

Cyclotron Windows 365 Pilot engagement will review your current IT environment and create an Azure Landing Zone environment, based on industry best practices to help you integrate with Windows 365 landscape. We will help you deploy your Windows 365 solution and design integration strategy with the existing IT landscape. This engagement will include:

1. Windows 365 cost projection and value proposition.
2. Established governance model for Azure
3. Management group architecture for your organization
4. Blueprints and policies applied to management groups
5. Cost management optimization
6. Hybrid cloud connectivity
7. Virtual network topology
8. Hybrid Identity
9. Systems management/monitoring.
10. Backup and recovery policies
11. Regional and fault tolerant architecture for desktop delivery

Once Azure Landing Zone is established, we will help you identify best path for migration from RDS/VMWare/Citrix to Windows 365 where you can take advantage of the cloud economics. We will work with you to define success criteria for your Windows 365 Pilot. Make your business more scalable and responsive to customer needs by building on-demand capacity and global/regional footprint with Windows 365.

Comprehensive approach for cloud deployment

Cyclotron's security focused approach will help you build extensible architecture that will meet your existing technical needs but will also scale well into the future. Our design will give you best practices architecture that can easily integrate with 3rd party solutions, while maintaining your security posture and minimizing your costs.

Optimize Your VDI

Envision cloud based virtual desktop to improve security and reduce complexity with Azure.

Cloud governance

Create a management group architecture to ensure your organization leverages cloud as you intended.

Minimize costs

Minimize surprises in your monthly costs by optimizing access to the cloud with guard rails.

Simplify VDI

Take advantage of VDI PaaS services to help reduce complexity and management costs.
