CYPAGO

Cyber GRC Automation Platform

Visualize, Automate, and Enforce Security & Compliance

The revolutionary Cypago Cyber GRC Automation (CGA) Platform combines the strength of SaaS architecture and advanced Correlation Engines, GenAI, and NLP based automation with an intuitive user experience, delivering complete coverage across all security frameworks and IT environments.

By reducing manual efforts, simplifying cross-functional workflows, and reducing costs, organizations can enhance their security and GRC maturity.

Revolutionizing Cyber GRC across all frameworks and environments

Fast Onboarding: Turnkey SaaS architecture allows for easy implementation, adoption, and integrations with existing tools and services

NextGen Automation Technology: Advanced Correlation engines, GenAI, and NLP capabilities that go beyond traditional automation

Complete Coverage: Support for any security standard and framework across all environments, cloud-based and on-premises

Security Program Validation: No-code automation workflows, with 100's of ready-made templates, for continuous control monitoring and gap discovery and mitigation

Ease of Use: Intuitive user experience and dashboards empower GRC Management, Security, and Ops teams to unify processes, streamline workflows, and demonstrate compliance
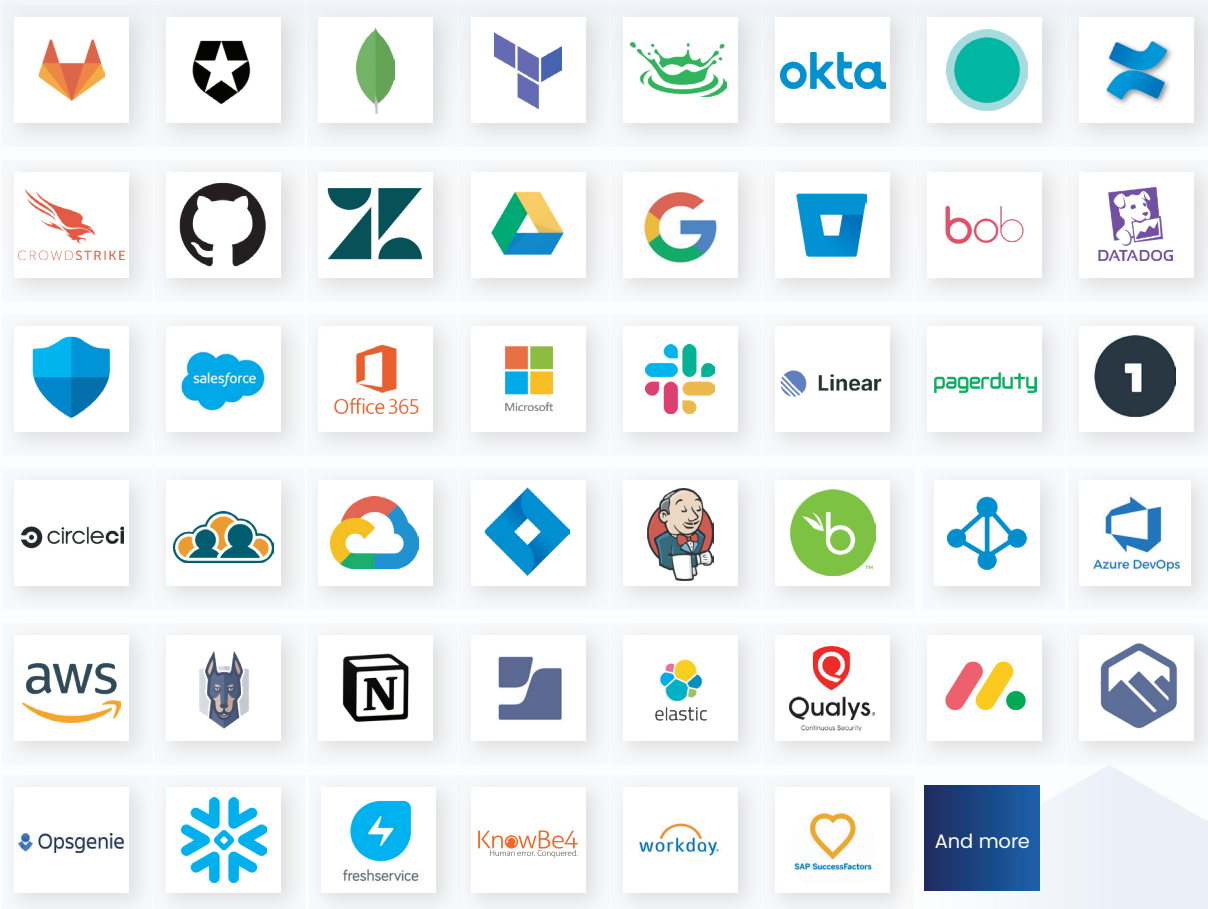

Lower TCO: SaaS delivery, out-off-the-box and customizable workflows, and centralized visibility and control reduces manual work and overhead

AICPA SOC 2 — Formerly SAS 70 Reports

ISO 27001 Certified — Information Security Management System

ISO 27017 Certified — Information Security Management System

ISO 27018 Certified — Information Security Management System

Sarbanes-Oxley Compliant

HIPAA

PCI DSS

Seamlessly integrate with cross-functional tools and services:

And more

Cypago's revolutionary SaaS-based Cyber GRC Automation (CGA) platform redefines the three lines model by eliminating friction and bridging the gap between management, security, and operations. It transforms GRC initiatives into automated processes, enabling in-depth visibility, streamlining enforcement, and significantly reducing overall costs.

The platform leverages innovative technologies, including advanced GenAI and NLP models, which are designed to support any security framework in any IT environment, both in the cloud and on-premises.
