

Control-M, delivered by Amdocs Digital Engineering

Streamlined Workflow Orchestration for Your Business

BMC Control-M, delivered by Amdocs Digital Engineering, a powerful solution for streamlined workflow orchestration tailored to meet the dynamic needs of your business. With BMC Control-M, enterprises can effectively automate, monitor, and manage their digital workflows, optimizing operational efficiency and enhancing productivity across the organization.

Business challenge

Companies today are increasingly challenged with delivering digital services faster than ever before. This need for speed has driven companies to shorten the time for delivering the applications that power modern digital services. Public cloud providers like Azure have innovated to provide services that allow provisioning of platform and infrastructure in virtually a single-click operation, with unmatched scalability and flexibility. With infrastructure provisioning down to minutes, companies are now looking for ways to achieve the same level of agility to install and configure applications that need to run on the cloud platform.

BMC solution

Control-M simplifies workflow orchestration across hybrid cloud environments. Configure Microsoft® Azure® with fast and easy provisioning and with native support for popular services such as Azure Batch, Azure Step Functions, Azure Data Factory, Azure Databricks. Users get full Control-M capabilities, including file transfer management, plus the elasticity, scalability, and high availability of leading cloud platforms.

KEY FEATURES

End-to-end orchestration of complex workflows across hybrid cloud environments

- **Complete workflow orchestration functionality** – All Control-M features for workflow development, scheduling, management, and integration can run in the cloud
- **Native support** on Azure for easy and intuitive integration with additional web services via Control-M Application Integrator
- **Automated provisioning** – Organizations that want to run Control-M on Azure cloud can have it configured and ready in minutes

KEY BENEFITS

End-to-end visibility of workflows across hybrid cloud environments

Standardized and simplified automation no matter which cloud technology is used

Faster deployment of cloud with a workflow orchestration solution across on-premises, public and private clouds

Run Control-M on leading Azure cloud platforms at the speed of business

Control-M environments are provisioned on Azure platforms within minutes

Product details

Unified Workflow Orchestration:

- Control-M simplifies application and data workflow orchestration across various platforms and applications from a single point of control.
- Easily build, define, schedule, manage, and monitor production workflows.

Advanced Operational Capabilities:

- Consumed by Dev, Ops, data teams, and lines of business.
- Connects to any application, data source, and critical systems of record (from mainframe to cloud).

Proactive SLA Management:

- Leverage intelligent predictive analytics to manage SLAs effectively.
- Keep business processes running smoothly and meet operational standards.

Robust Support for Audits and Compliance:

- Control-M ensures robust features for audits, compliance, and governance.
- Maintain control and adhere to industry standards with ease.

Stability and Scalability:

- Proven stability with thousands of companies scaling from tens to millions of jobs with zero downtime.
