A Complete Pentest Management Platform

1.

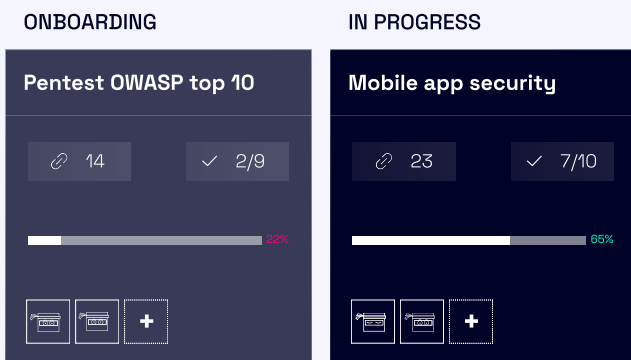

BENEFITS

A Complete Pentest Management Platform in the Cloud

Benefits

AUTOMATE PROCESSES & DELIVER A BETTER PENTEST EXPERIENCE

Oversight and Control

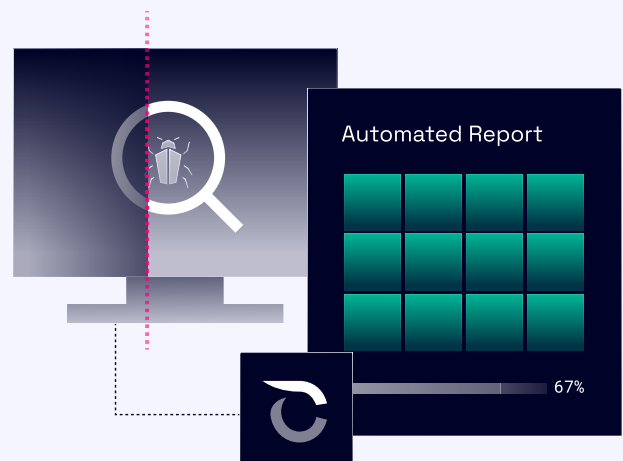

STAY IN CONTROL OF PROJECTS & TEAMS

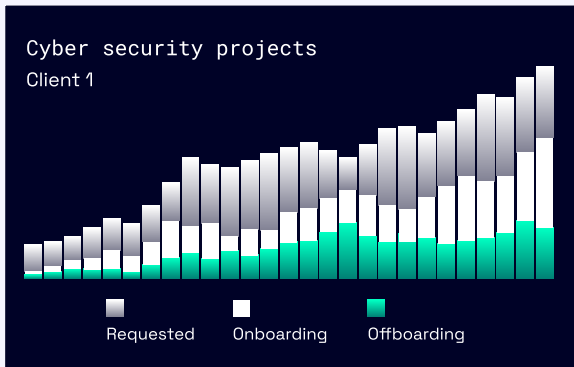

Leave excel and email project management in the past with digital project management designed for pentesters. Cyver Core offers cloud management tools, so you spend less time setting up and organizing pentests and more time doing them.

Automate & Innovate

OFFLOAD MANUAL WORK TO THE CLOUD

Save 20-30% of time on every pentest with automation tools for reports, project setup, and checklists. Cyver Core uses pentest norms, report and project templates, so you can cut repetitive copy-paste tasks and get back to the real work.

Client Relationships

GROW REVENUE WITH MORE PENTESTS PER CLIENT

Deliver more than just the report with cloud overviews, actionable findings, and collaboration. Build long-term relationships with tools to help clients remediate findings and pass audits, so they stay secure and compliant.

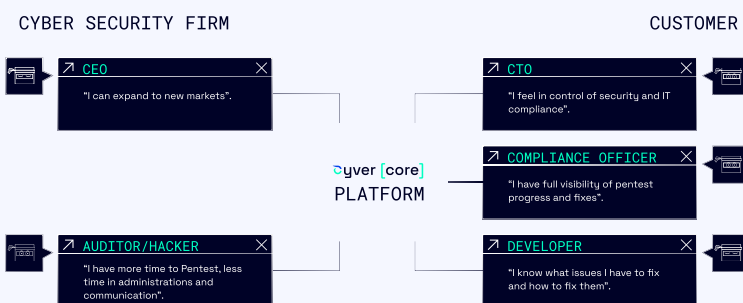

Agile Workflows

MEET CHANGING CLIENT NEEDS

Integrate pentesting into DevOps and Agile development cycles to deliver the security clients want and need. Delivering fast, cyclical, and on-demand pentesting keeps your services relevant, even as clients digitize their processes and work.

Client Relationships

GROW REVENUE WITH MORE PENTESTS PER CLIENT

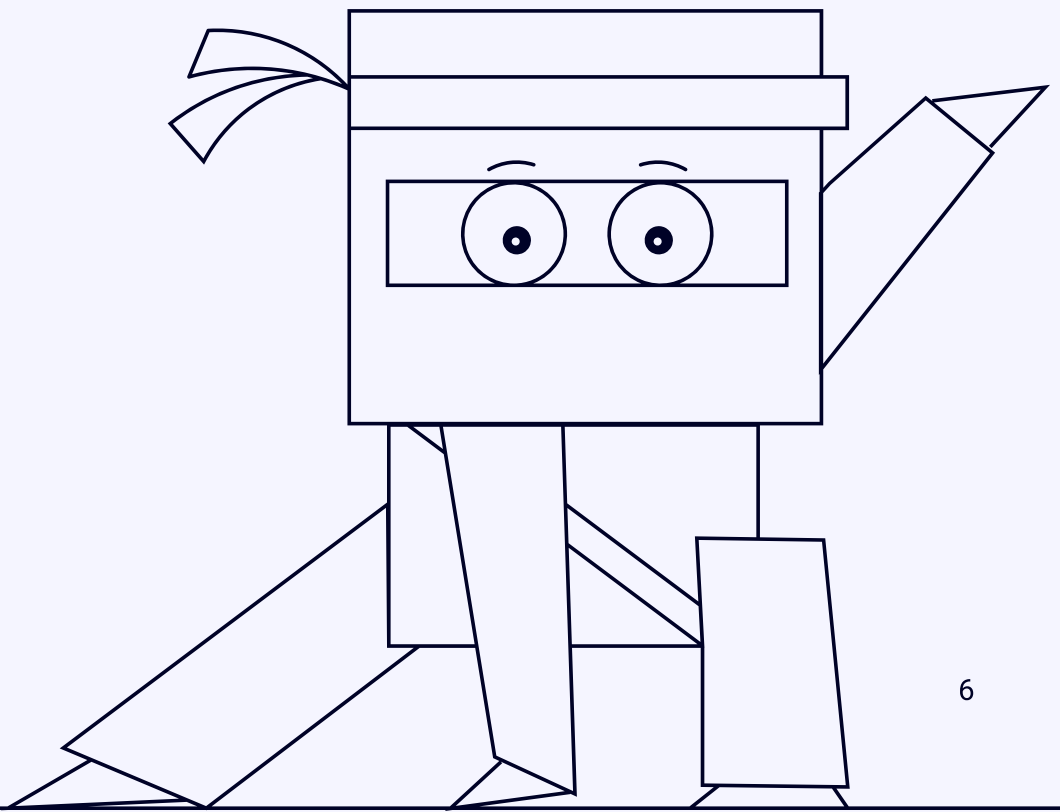

Deliver more than just the report with cloud overviews, actionable findings, and collaboration. Build long-term relationships with tools to help clients remediate findings and pass audits, so they stay secure and compliant.

2.

FEATURES

A Complete Pentest Management Platform in the Cloud

Features

A COMPLETE PENTEST MANAGEMENT PLATFORM IN THE CLOUD

Deliver Pentest-as-a-Service, linking clients with pentesters for ongoing, collaborative security and process management. Cyver Core offers everything a pentest professional needs to digitize, automate, and optimize work delivery.

Automated Reporting

Automatically generate reports (Web and PDF) by importing work data to report templates, & customize with Markdown, CSS, and tokens.

Compliance Norms Mapping

Map findings to standard compliance controls like OWASP Top 10, SANS Top 25, or ISO27001 to generate meaningful reports.

Vulnerability Scanner Integrations

Link tooling like Burp, Nessus, OpenVAS, and more to easily import findings directly from tooling into client dashboards and reports.

Pentest Checklists

Build accountability and save time with customizable pentest checklists for OWASP Top 10, OWASP Testing Guide, ASVS & more.

Automate Manual Work

PENTEST AUTOMATION

Cut manual reporting and management with automation, linking tools to project templates, and reports. We do the repetitive work, so you can get back pentesting.

Align People And Task

TEAM MANAGEMENT

Gain real pentest oversight & insight with team and task management tooling. Cyver Core's pentest management platform enables accountability and transparency across projects.

Role Management

Build teams and assign roles to automate project setup and offer stakeholder collaboration as a standard.

Assigned Tasks

Automatically assign tasks to relevant roles and start pentests with full oversight of who's responsible and why.

Real-time Notifications

Update stakeholders in real-time as project status changes, tasks become available, & clients make requests.

In-app Communication

Offer a better experience with real-time, in-app communication, so you never have to share data over email.

A New Way To Manage Pentests

PROJECT & FINDINGS MANAGEMENT

Get freedom to scale with simplified pentest project management. Cyver Core organizes your pentests across clients, so you can scale without hiring on more pentesters.

Project Templates
 Save time on every pentest with customizable project templates to automatically set up processes & tasks.

Findings Management
 Manage findings with libraries, labels, and attributes like CWE and CVE to organize and track completed work.

Full Traceability
 Automatically document findings, pentest tasks, and checks for full traceability and accountability across projects.

Project Workflows
 Onboard/Offboard projects, share results and manage projects with step by step Workflows to automate every process.

Collaborate On Client Security

CLIENT PORTAL

Deliver more than just the report with a full suite of client-facing tools designed for collaboration, remediation, and project management – for full visibility of your pipeline and clients.

Collaborative Pentesting

Clients see vulnerabilities and updates in real time so they can work on fixes immediately and stay secure.

Actionable Findings

Share actionable findings as tickets, so clients can quickly review, understand, and resolve vulnerabilities

Client Tool Integration

Give clients the oversight and control they need with integration for Jira and other project management tools.

Pentest Insights

Get at-a glance updates with project and vulnerability dashboards detailing risks areas and pentest results

Improved Customer Experience

RELATIONSHIP MANAGEMENT

Increase the lifetime value of every client. Cyver Core offers the tools you need to build longer, stronger client relationships with collaboration and customer experience.

Pentest Pipelines

Stay on track with project forecasting and scheduling to plan resources & workforce management, so you stay in control.

Recurring Pentest

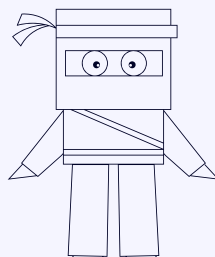

Deliver automatic, recurring pentests so you earn more per client, and they stay more secure with a long-term partnership.

Client Management

Get at-a-glance overviews for clients, with complete documentation, history of findings, and vulnerabilities.

White-Label Branding

Rebrand Cyver Core's client portal, reports, and templates to deliver improved customer experience under your own brand.

Full Deployment Control

DEPLOYMENT OPTIONS

Cyver Core offers a standard multi-tenant deployment in the Azure cloud as part of our base plan. But, Cyver Core offers solutions for organizations with more specific or custom security and deployment needs.

Deployment Region

Choose a deployment region in the EU, US, or UK to meet compliance or regulatory requirements.

Data Isolation

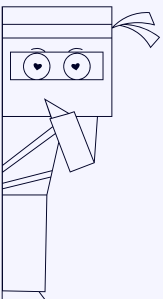

Get full database and storage isolation to protect your or customer data and meet regulatory requirements.

Full App Isolation

Fully isolate your Cyver Core app in deployment with a separate webapp, database, and storage.

Private Deployment

Maximize security with a private deployment in an Azure region or your choice or on your own servers.

Bring Your Own Tooling

API & INTEGRATIONS

Integrate your toolkit, extend Cyver Core functionality, and seamlessly pull data into one central platform with our API and integrations.

Link Your Tools

Link your tooling to seamlessly integrate custom workflows, actions, and more so you spend less time on project management.

Build Connectors

Automatically import vulnerability findings, libraries, descriptions, and more via an API, so everything is always where you need it.

Full Extensibility

With Cyver's REST API, you can connect to any tooling or sources you like, to push everything you need directly into the portal.

Events & Webhooks

Set up events and webhooks to automatically update project management, pentest management, scanners, and other tools as you work.

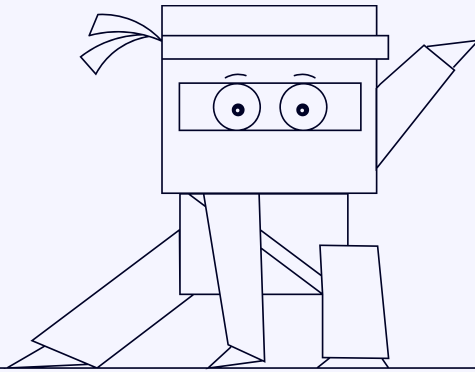

CYVER CORE'S FULL FEATURE LIST

Findings Management	Team Structure	Insights Advanced (Time to Fix / Risk Summary / Historic)
Findings Management	Board View	Request Pentest
Finding Instances	Timeline View / Planning	Share Files
Import Findings From File (Burp, Nessus, etc)	Project Workflow Customizable	Client API
Import / Export XML	Customize Project Name	Asset Import/Export Excel
Retest Workflow	Import Project	Weekly Email
Auto-fill Finding Data	Client management	Jira Connector
Labels	Client Management	Export Findings to Excel
Libraries	Client Logo	Roles (Manager, Project Only)
Merge	Client Contacts	Reporting
Customize Findings Grid	Client Portal	Report Client sharing
Reoccurrences	Share Findings	Download PDF
Review Workflow	Dashboard	Report Templates
Pentest Project Management	Notifications	Adjust CSS
Project Templates	Messages	Report Versioning
Project Workflow	Workflow Tasks	External Report
Files Upload	Insights (Pentest / Assets)	Footer Customization

CYVER CORE'S FULL FEATURE LIST

Background Image	Web Portal	Onboarding Assistance
Table of Contents	Responsive UI / Mobile Friendly	High Priority Lane
Assets management	Darkmode	Support Phone Line / Videocall
Assets Management	Portal Customization (CSS)	Premium SLA
Assets Management Import / Export	Deployment	
Checklists & Compliance	Cloud Deployment (Multi-tenant)	
Checklists	Choose Subdomain .cyver.io	
Compliance Norms	Deployment Region	
Multiple Compliance Norms / Project	Data Isolation (Database,Storage)	
Multiple Checklists / Project	Own top level domain (portal.client.com)	
User management	Full App Isolation (Webapp, Database, Storage)	
User Management (Pentester)	Private Deployment (Custom region)	
User Management (Client)	API	
User Roles (Manager, Project Only)	API Access	
2 Factor Authentication	Support	
Google Single-Sign On (SSO)	Support Centre For Immediate Help & Support	
Cloud Portal	Email / Ticket Support	

Great Pentests, Done Together
