● Optimise your Microsoft 365 environment Unlock the benefits of the modern workplace ●

Microsoft 365 transforms the way you work with best-in-class productivity applications, simple device management and always-on security. It enables your employees to work from anywhere, on any device, with enterprise email, cloud storage, a hub for teamwork, and applications all working together to deliver everything you need, in one solution.

However, many organisations do not have the appropriate resources to implement this new way of consuming IT applications and are missing out on collaboration and other benefits. It can be difficult to identify licencing requirements and configure prerequisites and enablers so that Microsoft 365 coexists with existing technologies and fully delivers on its expectations.

Overview

Daisy's Microsoft 365 Enablement Assessment is a four-day consultancy service that conducts an external review, current state assessment and migration strategy blueprint for adopting a modern workplace with Microsoft 365. Our assessment will help identify opportunities to improve IT services and cost models, business operations and working practices, to deliver an actionable roadmap for migrating seamlessly from your legacy environments to Microsoft cloud services.

What does Microsoft 365 Enablement Assessment deliver?

Following a discovery workshop of your existing estate, our assessment will deliver a roadmap to a Microsoft 365 modern workplace, comprising:

- Current state assessment of existing IT platform, systems, and processes
- Alignment of on-premise systems to cloud-native equivalents
- Migration and transition summary
- Microsoft 365 enablement training blueprint (optional)

Microsoft 365 Enablement Assessment Summary of Engagement:

This assessment will focus on the following key areas:

Item	Assessment	Modern Workplace
Identity	Existing identities and directory services	Identity synchronisation (hybrid identity) for M365 , identity security and management
Network	WAN and LAN network topology, site configuration, Wi-Fi, and VPN	Network planner for M365 services and data migration, ExpressRoute for Azure hosted infrastructure services
Users	User profiles and use cases (Office, remote, mobile, frontline)	M365 License feature mapping
Devices	End user devices, peripherals, and collaboration devices	Windows 10 Enterprise , VDI , Citrix Cloud and remote desktop services, Teams compatibility
Delivery Mechanism	Device provisioning and device management	Autopilot , Endpoint Manager (Intune) and integration with existing solutions, i.e. System Centre Configuration Manager (SSCM)
Applications	Application discovery (line of business, commercial off the shelf, Cloud, third-party)	Microsoft Enterprise and Office 365 , Exchange Online , Teams and SharePoint Online
Security	Identity security, device security, network security and access management requirements	MFA , conditional access , identity management, device compliance, web filtering and email security
Data	Data landscape, repositories, and size	SharePoint , OneDrive , archiving and backup, information protection

daisy.

CORPORATE SERVICES
