• Workplace
collaboration is key:

unlock your businesses
full potential •

Modern organisations are now defined by how they implement collaboration and bring about teamwork in the ever-changing landscape of the 'workplace'. The ability to work with your employees from anywhere, from any device and for colleagues to share information and ideas in real time, and with connected customers, is what now differentiates these modern organisations to those that remain static.

Overview

This is where the highly functional Microsoft Teams comes into its own. Providing immediate access to all your apps and documents, the app allows you to easily respond to chats and conversations, join meetings with one click and continue to collaborate. Microsoft Teams makes collaborating less stressful when on the move too – so you're always connected.

Daisy's Microsoft Teams enablement assessment is a 1-day consultancy service delivering:

- A discovery and readiness workshop
- Envisioning and usage scenario planning
- Adoption planning

What does Microsoft Teams Enablement Assessment deliver?

Daisy will work closely with your business to produce a detailed report that includes:

1. Discovery and Readiness Assessment (2 hours)

We will explore your existing IT landscape and determine your current state network and end user compute infrastructure and configuration. We want to know where your end users are located, where the data they

need is accessed from, how they connect to the Internet and across what links, and what types of devices they are currently using.

Understanding your business and technical requirements for Microsoft Teams will also be key.

The analysis will determine your readiness for Microsoft Teams and identify if you should be making any immediate changes to support the adoption of Microsoft Teams successfully.

2. Envisioning (2 hours)

This part of the workshop aims to give you a thorough understanding of the core functionality of Teams including team creation, channel administration, instant messaging, audio and video calling, meetings, and file sharing.

It will also include an overview of Teams Calling and Microsoft Teams Rooms and outline the key decision points to consider when deploying Teams Calling and Teams Rooms. We will also use this discussion and demonstration to identify your specific usage scenarios and requirements, so that we can map the features of Microsoft Teams to those requirements. An important aspect of this will also be to understand your security and governance needs. Then we can tailor the configuration of Microsoft Teams to protect your corporate data and provide the necessary access controls.

3. Adoption Planning (2 hours)

This is the fun part! When you are ready to deploy Microsoft Teams we will take you through how to successfully implement teams to your end users. We will explain the need for specific users to be nominated as 'Microsoft Teams Champions' in your organisation and how we can communicate the upcoming changes to your end user state effectively.

We understand that your end users will need training, Daisy can offer specific training plans tailored to your business's specific requirements. We will discuss your training requirements and then tie all this together in an implementation and adoption plan.

You will hear what this entails and how this is typically managed, using Daisy's extensive experience of delivering Microsoft Teams solutions.

Daisy's Microsoft Teams Enablement Assessment

Microsoft Teams	Discovery: <ul style="list-style-type: none"> - Current State Assessment - Target State Objectives - Readiness Assessment
