

# SITE LIST EFFORTLESS SHAREPOINT SITE NAVIGATION & MANAGEMENT

Managing SharePoint sites doesn't have to be complicated. Site List by Dalikoo offers a streamlined way to create, manage, and discover SharePoint sites. With its dynamic interface, permissions-aware access, and built-in search, Site List transforms how your organization navigates its intranet.

## KEY CAPABILITIES

### DISCOVERY & NAVIGATION

- View all sites a user has access to, including name, URL, creation date, and author.
- Search and sort instantly by title, URL, date, or author.

### PERMISSIONS-AWARE EXPERIENCE

- Results respect SharePoint permissions (Owners, Members, Visitors).
- Users only see the sites they're allowed to access.

### SITE CREATION & MANAGEMENT

- Create new SharePoint sites directly from the interface.
- Use templates for consistent branding and layout.
- Easily update ownership and membership.

### HUB & STANDALONE DEPLOYMENT

- Works in SharePoint hubs or standalone sites.
- Offers flexible display options to fit different intranet needs.

### PERFORMANCE & RELIABILITY

- Powered by Microsoft Graph API for accurate, real-time data.
- Caching via an internal SharePoint list ensures fast response times

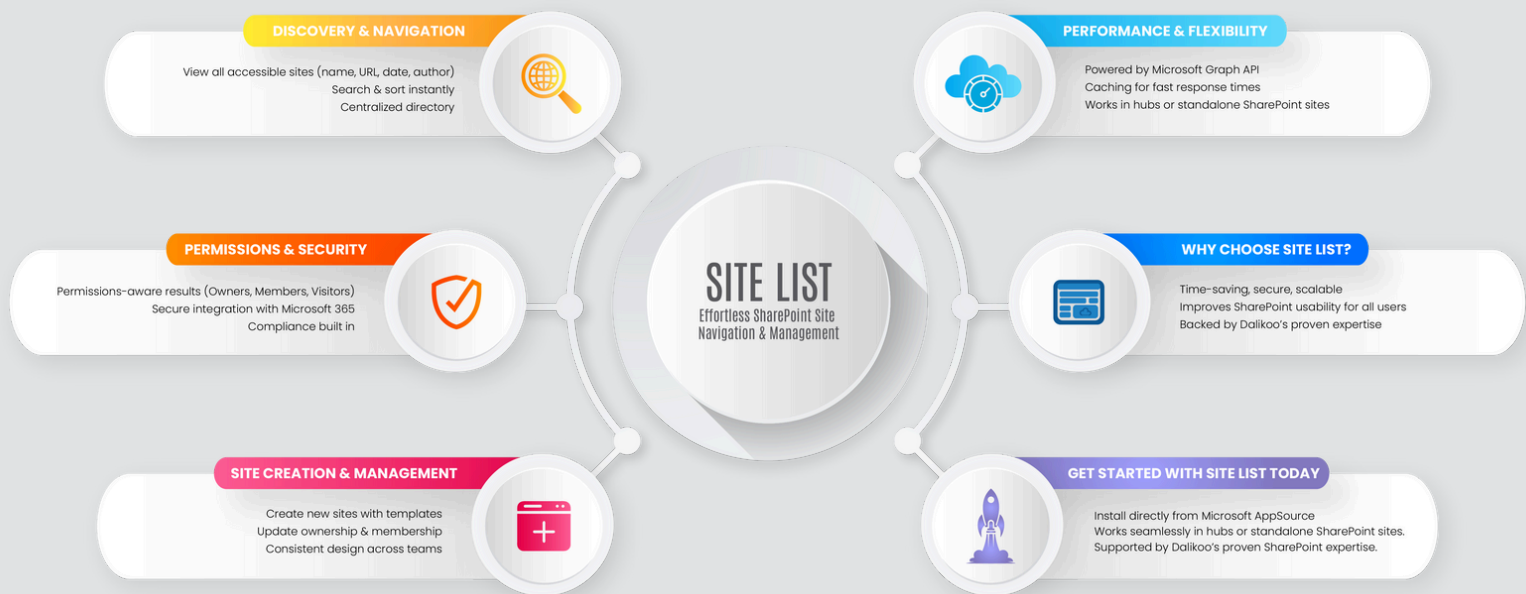

# WHY CHOOSE SITE LIST?

- **Improved Usability:** A centralized, user-friendly directory of all sites.
- **Time Savings:** Find the right site instantly instead of searching manually.
- **Security First:** Always aligned with Microsoft 365's permissions and governance.
- **Scalable:** Works for organizations of any size, with support for growing site collections.
- **Proven Partner:** Dalikoo is a Microsoft-recognized partner with a track record of delivering SharePoint success.

## HOW IT WORKS

Site List uses Microsoft Graph API to surface all SharePoint sites a user has access to. To optimize performance, it maintains a “Recent Listings” cache in a SharePoint list. The result is a secure, fast, and accurate site directory for every user.
