

AI Workflows for Impact Organizations

How do we move beyond one-off AI demos to real innovations that create measurable impact for beneficiaries? How do we leverage the constant advances in AI and ensure that effective solutions multiple? We need a global ecosystem of experimentation, innovation and collective knowledge sharing.

Gooley.AI is the partner and platform that powers the world's best impact organizations to quickly build AI that's measurably valuable to their beneficiaries.

LLM

The screenshot shows the GOOEY.AI website's LLM comparison tool. The page title is "Compare LLMs: GPT4 vs PaLM2 vs LLaMA2". Below the title, there is a brief introduction and a "Run" button. The main interface is divided into two columns. The left column contains a "Prompt" section with a text input field containing the question: "In terms of coolness, what are the top 5 car brands sold in the US? Answer as a ranked list of car brands." Below the prompt is a "Compare Language Models" section with a grid of checkboxes for various models: GPT-4 (openai), ChatGPT (openai), ChatGPT 16k (openai), PaLM 2 Text (Google), GPT-3.5 Davinci-3 (openai), Curie (openai), Ada (openai), Llama 2 (Meta AI), PaLM 2 Chat (Google), GPT-3.5 Davinci-2 (openai), Babbage (openai), and Codex [Deprecated] (openai). The "Llama 2 (Meta AI)" checkbox is checked. A "Settings" dropdown is at the bottom left. The right column shows the results for the selected model, Llama 2 (Meta AI). A green success message at the top right indicates "Success! Run Time: 27.34 seconds." The output text reads: "Based on their popularity and perception of coolness, the top 5 car brands sold in the US are: 1. Tesla - With its innovative electric vehicles and sleek designs, Tesla is definitely one of the coolest car brands around. Its cars are not only environmentally friendly, but they also have impressive performance and advanced technology features. 2. Ford Mustang - The Mustang is a classic American muscle car that has been around for decades, and it still retains its cool factor, its powerful V8 engine, aggressive styling, and iconic status make it a popular choice among car enthusiasts. 3. Dodge Challenger - The Challenger is another classic American muscle car that is known for its powerful engine, retro aesthetic, and spacious interior. 4. Chevrolet Camaro - The Camaro is a modern American muscle car that combines classic styling with advanced technology. 5. Porsche Carrera GT - This is a high-performance sports car that is highly regarded for its exceptional driving experience and iconic design." A "Submit" button is at the bottom right.

Speech Reco + Translation

The screenshot shows the GOOEY.AI website's Speech Recognition & Translation tool. The page title is "Speech Recognition & Translation". Below the title, there is a brief introduction and a "Run" button. The main interface is divided into two columns. The left column is for "Audio Files" and has a checkbox for "Enter Custom URLs" which is checked. A text input field contains a YouTube URL. Below this is an "ASR Model" dropdown menu with "Whisper Large v2 (openai)" selected. A "Spoken Language" dropdown menu is set to "English | en". A "Submit" button is at the bottom right. The right column is for "Transcription" and shows a text box with the transcribed text: "Hi, I'm Sean, one of the founders here at GUI. And I wanted to give you a demo today of how to use one of our recipes, a face in any scene. So just go ahead and click on this, And so the scenario that I'd like you to imagine with us is let's imagine, you know, rather than trying to do stuff with Elon Musk, we are working for a travel agency and we've got a spokesperson and we want to show that person basically all over the country in a variety of locations. Which is expensive because you got to send that person out, you got to do a photo shoot. And so what I'd like to see is a photo of a person in a variety of locations." Below the transcription is a "Related Workflows" section with several workflow cards.

Our protagonist seems to have a strong affinity for mathematics, but his feelings towards physics aren't as clearly defined. He does, however, show some knowledge and interest in the subject. For instance, he recommends a physics book to Vidya, suggesting that he understands the subject well enough to recommend study materials^[4]. He also mentions Pi Day and Einstein's birthday, which indicates some level of interest in physics^[5]. However, these instances don't necessarily mean he likes physics. They could simply be part of his role as a tutor. So, based on the information available, it's hard to definitively say whether he likes physics or not.

IPRD Health Bot

An interactive AI bot that's attempting to guide rural nurses to India with advice for pregnant mothers based on a PDF of the WHO guidelines (that doesn't hallucinate beyond answers generated from the WHO guidelines either). A collaboration between Gooey.AI and IPRD Solutions.

🏃 Run 📁 Examples 🔗 API ⌛ History 📁 Saved 🌐 Integrations

📝 Instructions

You are an intelligent AI assistant. Follow the instructions as closely as possible. If the user wants to reset the chat, print `<|reset|>`.

health worker: Let's role play a clinical situation. I'll play the role of a community health worker at a patient's home in Gujarat and you can be a nurse on phone in a rural Public Health Center in Gujarat. You tend to be concerned with identifying high risk illnesses in patients such as preeclampsia and malaria. You are helping me attend to the patient at her home in my village. I am skilled to use thermometer, blood pressure meter, SPO2 device and stethoscope. I can collect urine samples. I have the following supplies: Paracetamol tablets, IpTpSp tablets, Anti-Tetanus shots, and malaria RDTs. Please generate your answers based primarily. Use an unbiased, succinct, and friendly tone. Think step by step and ask questions one at a time.

🧠 Language Model

Update

Compare Kannada Speech Recognition

In this bulk run example, we compare 3 different Goody.AI speech recognition + translations workflows (<https://goody.ai/speech>), each of which uses a different AI speech model:

Whisper v2 Google Chirp Azure

We then evaluate them at <https://goody.ai/eval/> (where you can see what works best...)

Run Examples API History Saved

Goody Workflows

Provide one or more Goody.AI workflow runs. You can add multiple runs from the same recipe (e.g. two versions of your copilot) and we'll run the inputs over both of them.

Speech Recognition an...	Whisper Large v2 - Kannada			
Speech Recognition an...	Chirp - Kannada			
Speech Recognition an...	Azure - Kannada			
Speech Recognition an...	Seamless M4T Kannada -> EN			
+ Add a Workflow				

Input Data Spreadsheet

Upload or link to a CSV or google sheet that contains your sample input data. For example, for Copilot, this would sample questions or for Art OR Code, would be pairs of image
