DARKTRACE

Darktrace + Microsoft: Better Together

Award-winning partnership.
Complementary technologies.

Darktrace & Microsoft deliver proactive, tailored cybersecurity solutions

Darktrace's AI learns from customer's data, detecting threats and intervening against attacks with precision and speed.

The Darktrace ActiveAI Security Platform provides un-paralleled visibility — securing the cloud, email, apps, OT, endpoints and network. We Defend Beyond through our proactive, AI-native products, helping customers achieve proactive cyber resilience.

To further elevate and extend your cybersecurity stack, it is highly encouraged to combine Darktrace with an E5 Microsoft deployment as they work together in a complementary manner.

Together, customers receive much clearer and expanded telemetry information beyond only network or endpoints. In action, integrated investigations are resolved in record time as workflow processes are considerably condensed and are bespoke to every deployment with both Cyber AI Analyst and Security Copilot's guidance. Alongside powerful AI tools, customers get peace of mind knowing their cybersecurity investment is supported by a strong technical partnership between two companies.

Through this partnership, customers establish a cybersecurity environment that is complete, continuous, and contextual.

Complete coverage

Protecting the entire environment through comprehensive detection and response capabilities.

Continuous optimization

Maximizing ROI, while creating a more powerful SOC.

Contextual tailored AI

Delivering complementary, diverse approaches from two global AI leaders, providing bespoke solutions to every customer.

## Awarded & trusted cybersecurity partnership

2024 UK Partner of the Year

Global ISV Security Partner

Member of Microsoft Intelligent Security Association [MISA]

10,000 customers

Commercially available in Azure Marketplace

Microsoft
2024 Partner of the Year

Winner
United Kingdom

Member of
Microsoft Intelligent
Security Association

Microsoft Security

Distinct & complementary AI approaches

Attacker centric approach

- Focus on modelling attackers and attack techniques

- Pre-trained on cross-tenant, external data

- Microsoft asks is this good or bad for this type of business?

Business centric approach

- Focus on modelling organizational structure and behavior

- Self-Learning AI trained purely on internal data

- Darktrace asks is this normal for your business?

Product synergies

The majority of Darktrace customers are Microsoft customers too. Why do security leaders deploy our technologies together?

- Darktrace / NETWORK is deeply integrated with Microsoft Defender for Endpoint (and Azure) to create a seamless NDR-EDR visibility continuum.

- Darktrace / EMAIL enhances detection sensitivity and expands the threat detection spectrum of Defender for Office 365, improving overall resilience to known and unknown email attacks.

- Combined AI approaches enhance accuracy and completeness in investigations. Cyber AI Analyst shares findings with Security Copilot, guiding Copilot investigations and providing insights into areas Microsoft doesn't natively track.

The most complete Autonomous SOC with unmatched speed and scale

Darktrace	Microsoft
- / NETWORK	- Defender for Endpoint & Azure
- / CLOUD	
- / OT	- Sentinel

Maximizing email protection in a seamless integration of AI-driven security

Darktrace	Microsoft
- / EMAIL	- Defender for Office 365
- / IDENTITY	
	- Purview
	- Entra

Enhancing investigation velocity through bespoke AI guidance

Darktrace	Microsoft
- Cyber AI Analyst	- Security Copilot

The pinnacle of the partnership: Darktrace meets E5 security

Microsoft's vast threat intelligence enhances modeling capabilities, creating more precise Cyber AI Analyst Reports

Deploying Darktrace and Microsoft together unlocks complete visibility of your entire digital estate

Legacy email security tools overlap and devalue E5 investments, while Darktrace supercharges Defender, maximizing ROI

■ **About Darktrace**

Darktrace is a global leader in AI cybersecurity that keeps organizations ahead of the changing threat landscape every day. Founded in 2013 in Cambridge, UK, Darktrace provides the essential cybersecurity platform to protect organizations from unknown threats using AI that learns from each business in real-time. Darktrace's platform and services are supported by 2,700+ employees who protect nearly 10,000 customers globally. To learn more, visit www.darktrace.com.
