data8

Validation Services Overview
Phone Validation

The Data8 Phone Validation service captures accurate, callable contact information in real-time. Incorporating three core products, the Data8 Phone Validation Service can be quickly and easily integrated into almost any system.

UK Landline Validation

The UK landline phone validation service is a fast and efficient method to validate which UK landline numbers are live. The solution works by integrating in real-time with the telephone network, using our own custom hardware and software configuration to verify the number is live and will dial. This validation uses the actual telephone network and not a static database ensuring accurate, reliable results.

Mobile Phone Number Validation

Our real-time Mobile Number Validation service is a fast and efficient method to validate which mobile numbers are still live. Additional fields can also be exposed on Dynmics form such as the network they are on, whether the phone is switched on, the country the phone is registered to and even the country the phone is currently located in.

International Phone Number Validation

The Data8 Phone Validation service offers the option to validate global land-line and mobile phone numbers to immediately identify bogus phone numbers.

Quickly and easily integrate with CRM & eCommerce platforms

Data8 Phone Validation integrates with all leading CRM and eCommerce platforms, as well as via API's for bespoke systems. Integratiions available include:

- Magento Commerce
- Prestashop
- WooCommerce
- Opencart

- Microsoft Dynamics 365
- Salesforce
- Sage

Advanced Options

The following options can be specified as part of the service:

Ignore Extra Digits

Indicates if any extra digits beyond those needed to dial the number should be ignored. With this option turned on, 015135545550 would be returned as valid even though the number is really 01513554555 without the trailing 0, otherwise it would be invalid.

Allowed Prefixes

An optional comma-separated list of telephone number prefixes that are allowed. If this option is specified, any telephone number that does not match one of these prefixes is automatically flagged as invalid. These numbers must be specified in international format.

Barred Prefixes

An optional comma-separated list of telephone number prefixes that are not allowed. If this option is specified, any telephone number that matches one of these prefixes will automatically be flagged as invalid. These prefixes must be specified in international format.

Industry experts in data quality

Data8 was founded in 2005 with the ambition to deliver market leading data solutions. We have evolved to be an award-winning data quality management company, delivering a range of data-driven marketing, data quality management and address validation solutions for an ever-growing client base.

We work with our clients to help them understand and enhance their data. Our solutions deliver benefits in a number of areas including helping achieve compliance, increased sales and improving marketing return on investment.
