A platform built to elevate your care organisation

The DC2Vue SaaS platform is built to empower care organisations to navigate key challenges such as stretch resourcing, increasing compliance and risk management demands. This comprehensive platform enhances care delivery quality, focuses on individual care and outcomes, and facilitates the creation of efficient internal teams. By maximising resource use and optimising care-specific scheduling and rostering, the platform ensures operational efficiency. DC2Vue is the ideal solution for care organisations looking to expand their operations and business efficiently.

Why DC2Vue SaaS?

User-centred design

Focus on technologies that improve user experience for clinicians, operational staff, and patients

Trusted

Ensure platform technologies uphold key trust elements: privacy, ethics, social responsibility, compliance, security, sovereignty, and risk.

Intelligent

Enable information synthesis, deliver insights, and provide actionable analysis tools.

Agile Developed

Power agile development with digital business platform tools.

Modular

Support modularity for agility, efficient adaptation to business unit needs.

Cloud-Native

Enable cloud-native development and facilitate cloud delivery using digital platforms.

About Me

- **Comprehensive Care Planning:** A personalised care plan for each patient that addresses their specific needs, preferences, and goals
- **Effective Communication:** Clear, timely, and secure communication among all parties involved in care. Promoting understanding and collaboration among the multi-disciplinary care team.
- **Care Transitions:** Smooth transitions between care settings and levels with coordinated appointments and information sharing and education
- **Budget Management:** Planning and tracking expenses related to the service activities ensuring cost-effective service delivery and aligning resources with the patient's needs and treatment plan.
- **Quality and Outcome Measures:** Assess the quality of care provided and measure patient outcomes to continually improve coordination efforts.

Experience the future of smart scheduling and rostering – where precision meets simplicity

The screenshot displays the 'Appointments' interface. At the top, there's a header with the title 'Appointments', a notification bell, and the user's name 'John Doe'. Below the header is a navigation bar with buttons for navigation (back, calendar, forward), 'Today', a 'Status' dropdown, an 'Auto' button, and three action buttons: 'Waitlist', 'Publish', and 'Add Shifts'. The main area is a calendar grid with columns for days from Sun 5/4 to Fri 5/9. A search bar is on the left. The grid shows various appointments for staff members: James Charles, Verna Martin, Jane Doe, Lucy Williams, John Doe, and Richard Miles. Some appointments are highlighted with colored boxes, and a dashed arrow indicates a drag-and-drop action from a box on Sun 5/4 to a box on Mon 5/5. There are also 'Unavailable' blocks for Jane Doe on Wed 5/7 and Lucy Williams on Fri 5/9.

- **Multi Calendar Views – Tailored for You:** Enjoy flexibility with customisable multi-calendar views, ensuring each user can personalise their interface for optimal efficiency.
- **Drag And Drop:** Simplify organisation with intuitive drag-and-drop functionality, making schedule and assignment management a breeze.
- **Reschedule with Ease:** Adapt on-the-fly by effortlessly rescheduling entire days, managing workloads, and adjusting individual appointments with precision.
- **Day, Calendar, and Timeslot Rules:** Maintain control and flexibility with customisable rules for days, calendars, and timeslots, aligning with your unique organisational needs.
- **Outlook Integration:** Streamline communication with seamless Outlook integration, providing a unified experience across platforms for enhanced collaboration.
- **Complete Visit Workflow:** Maximise efficiency by managing the entire visit workflow within each appointment – from notes to follow-ups – ensuring a comprehensive approach to patient care

Automate billing, claiming and reporting workflow
