

# The essential need for your organisation

One of the key challenges in any organisation is how to utilise information effectively. Information is the lifeblood of organisations and when utilised to its full potential it can be transformative. With the amount of information being created by organisations steadily increasing, simply storing it is not enough. The amount of time it takes users to find the right information, understand it and consume it, increases proportionate to the amount of information they must wade through.

Imagine giving your staff their own AI assistant who understands their needs and gives them the power to unleash their creativity, increase productivity, and connect them to people and information.

This is now possible with Microsoft 365 Copilot – the next evolution in artificial intelligence technologies from Microsoft. Microsoft 365 Copilot is your ultimate ally, with the power to turn information into knowledge, and knowledge into action.

Deploying Microsoft 365 Copilot without a thorough evaluation of your technology platform and information (particularly sensitive or private information) increases the risk of potential breaches, mishandling of information, and decisions being made based on out-dated or incorrect information.

Before you invest in Microsoft 365 Copilot, it is vital for you to understand your goals for Copilot, your information landscape, and your technology platform readiness. Doing so will ensure you understand the possible risks and are positioned to mitigate or prevent them from happening.

Datacom's Microsoft 365 Copilot Launchpad offering will ensure you are ready and set up for success with Microsoft 365 Copilot.

# The path to success

Datacom's Microsoft 365 Copilot Launchpad not only focuses on the technical configuration of your Microsoft 365 environment, but your information and people. It is a three-part process that sets you on a path to success with Microsoft 365 Copilot by reducing the risk of over-sharing, leaks and breaches, inappropriate use of information and identifying the innovations and outcomes that support decision making and problem solving.

## Setting your Microsoft 365 Copilot course

The engagement begins with an ideation session, defining your organisation's goals and aspirations for Copilot – including identifying who in your business will get the most benefit from Copilot, and any risks that may arise. This ensures you're entering this fully informed and equipped to maximise your investment in Microsoft 365 and Copilot.

## Your information and technology discovery voyage

Once your course is set, Datacom will conduct a holistic assessment of your information landscape. The goal is a comprehensive understanding of what information you have, where it's located, who has access to it, how you are governing it, and how you are managing it through the information lifecycle.

Datacom will also evaluate your technical configuration against jurisdictional legislation and compliance frameworks, and ensure you meet the defined prerequisites for Microsoft 365 Copilot.

## Navigating your way forward

The final stage is the presentation of a report detailing your current state, and a roadmap to achieving success with Microsoft 365 Copilot. You'll have confidence to embark on the Microsoft 365 Copilot journey, and benefit from an enhanced understanding of your organisation's information management needs and risks.

# Key benefits

From this engagement, you can expect the following benefits:

1. Be prepared and informed for Microsoft 365 Copilot.
2. Have confidence to start a safe and secure AI journey.
3. Gain a comprehensive understanding of:
  - a. What information you have,
  - b. Where it is located, and
  - c. Who has access to it.
4. Understand where you need to apply controls to ensure information is secure and mitigate risk.

## Embrace the opportunity
