Migrate Teradata to Microsoft Fabric

Modernizing Retail & Consumer Goods Data Platforms

teradata.

Power BI

Why Migrate to Power BI?

- Legacy Teradata infrastructure limiting scalability and flexibility
- Slow ETL processes and high data transfer times
- Dependence on storage triggers increasing system fragility
- High maintenance costs and limited automation capabilities
- Need for a unified analytics platform integrating Power BI

What We Offer

Comprehensive Teradata to Fabric Migration Service

- Replace Teradata ETL with Fabric Data Factory pipelines
- Migrate data, metadata, and stored procedures into Fabric Lakehouse or Warehouse
- Enable real-time insights and automation through Fabric and Power BI
- Improve performance, reliability, and operational efficiency

Cost-Free Proof of Concept (PoC)

We offer a **free PoC** to showcase the benefits of Power BI before committing to a full migration. Experience improved analytics and performance risk-free!

Key Improvements

Enhanced Feed Grouping - Use Fabric Data Factory to group Extract & Load activities, eliminating triggers and improving reliability.

ADF Bulk API Integration - Use ADF Bulk API for faster extraction and loading, improving ETL efficiency.

Unified Fabric Platform - Leverage Lakehouse and Data Warehouse for scalable analytics and seamless Power BI integration.

Automation & Monitoring - Centralized pipeline monitoring, alerting, and cost optimization within Fabric.

Key Benefits

Performance & Efficiency – Reduced extraction time and faster ingestion

Reliability & Stability – Elimination of storage triggers

Cost Reduction – Lower infrastructure and operational overhead

Scalability – Cloud-native architecture ready for retail-scale data

Integration – Native Power BI and Fabric alignment for analytics

Why Choose Us?

Microsoft Fabric & Power BI Experts

Deep experience delivering end-to-end data modernization and analytics solutions using Microsoft Fabric, Data Factory, and Power BI.

Industry-Focused Delivery

Proven success with retail and consumer goods enterprises handling large, complex data pipelines across POS, ERP, and CRM systems.

End-to-End Migration Framework

Comprehensive methodology covering preparation, migration, validation, and post-deployment optimization using Microsoft-recommended practices.

Scalable & Secure Architecture

Built on Microsoft Fabric's unified platform with integrated governance, role-based access control, and enterprise-grade data security.

Funding Opportunities

As a Microsoft Partner, we can work with Microsoft account teams to explore **ECIF** and **Azure Innovate** funding eligibility, helping qualified customers accelerate migration and reduce project costs.

Performance & Reliability

Proven improvements in data transfer speed, system reliability, and analytics responsiveness through optimized Fabric Data Factory pipelines.
