Consulting Offer

Data Purpose

Getting reports and dashboards with SAP data takes long?

Experience with your own data how to:

- *accelerate time to market 2-10x*

- *double user satisfaction*

SAP Data with Microsoft Analytics and Data Platform – Overview
5-days Proof-of-Concept

Data Purpose

Use SAP Data in Power BI

The user friendly interface together with the low entry barriers, make Power BI the favourite tool for casual and power users alike. This is a blessing for any company on its way to become data-driven.

Power BI can also be used with SAP data; however, if not using the right interfaces and applying the correct governance, issues quickly appear:

- Incorrect / inconsistent reports

- Circumvention of data security /authorizations

- Data redundancy and leakage

- Licensing issues

- Expensive and error prone maintenance

No two enterprises with SAP and Microsoft are the same. Goals, systems and organizations differ. In this proof of concept we validate for you the functionality and performance of the correct Power BI to SAP interface.

SAP Data with Microsoft Analytics and Data Platform– Statement of Work
5-days Proof-of-Concept

Data Purpose

Scope

Day 1: Goal setting and Kick-off
Create a common understanding of:
- reporting / dashboarding topic, goals and challenges
- key functional and performance goals to be validated

Day 2-4: Proof-of-concept
- PoC architecture design
- Data source connection
- Implementation of 2-3 reports in Power BI
- Measure results against goals

Day 5: Identify improvements, define and prioritize supporting measures
- Document and discuss results
- High-level cost estimate, suggestions for further improvement.

Out-of-Scope

- Licensing / subscriptions (trial licenses may be used)
- A proof-of-concept does not guarantee production readiness

Deliverables

- Proof-of-concept in Power BI (including PBIX file)
- Technical documentation
- Summary of goals and results

Cost

We adapt the approach to your individual situation and needs. The development of 2-3 reports as a proof-of-concept costs roughly 9800 CHF / USD and is confirmed in final offer.
