

DATA RISE LAB

WHO WE ARE

DataRiseLab is a company specializing in the implementation of data management solutions (data warehouses, integrations with data sources, data transformations and modelling), creating advanced reporting solutions (BI, business applications) and analytical solutions, implementing cloud solutions. Our Team consists of the best specialists who have gained experience working in renowned global consulting companies, international giants in the IT industry and through cooperation with global corporations from various economic sectors. By combining knowledge in the area of business and technology, we effectively support our Clients in implementing innovative business solutions.

SECTORS

Finance, restaurants, retail, industrial production, automotive, energy, healthcare, mining, telecommunications

WHAT WE OFFER

DATA, ANALYTICS AND REPORTING

- Data warehouses and integration of data from various sources (using API or other available integration methods)
- Data modeling and reporting platforms (BI)
- Advanced data analytics using ML/AI
- Data management (including Master Data), data quality and security

BUSINESS APPLICATIONS

- Development of dedicated business applications
- Application integration with data warehouses and reporting platforms (BI)
- Specialized solutions for the financial, restaurant and real estate industries
- Technical support, maintenance and development of applications

CLOUD

- Planning and implementing cloud solutions
- Migration of solutions to the cloud
- Optimization, maintenance and management of data in cloud and cloud in general

AI AND MACHINE LEARNING

- Predictive Analytics: Predict customer behavior, optimize pricing, and forecast demand
- Machine Learning solutions to streamline processes
- Recommendation Systems that suggest products or content based on user preferences
- Generative Models and AI for tasks such as text summarization, content creation, or automation of human tasks

COMPLETED PROJECTS

- Design and implementation of a data warehouse, integrating data from Client's key systems (ERP, POS, operations support systems) and from external sources, development of BI reporting platform
- Automation of the process of creating financial reports according to local and group accounting standards (with the ability to manage the mapping of accounts and individual transactions to individual lines in these financial reports)
- Migration of data warehouses and business applications from "on premise" to the cloud (MS Azure)
- Controlling platform for analyzing results in capital group branches (with the functionality of providing comments on deviations, forecast acceptance workflow, sensitivity analysis), monitoring costs and tracking unusual transactions
- Application for reporting ESG metrics and KPIs by subsidiaries of the capital group
- Design, implementation, maintenance and development of cloud infrastructure for an international capital group
- Customer support in managing data, services, costs, identity and security in the cloud
- Application for reporting results, forecasts and operational goals of stores in the restaurant industry, integrated with the BI reporting platform
- Application for managing new investments (CAPEX management - including estimation of investment costs, cash flow management, calculation of NPV and payback period), with investment approval workflow, integrated with data warehouse for retrospective investment profitability assessment

DATA RISE LAB

WHY US

We treat each project individually, committing ourselves to a full understanding of the business and a thorough analysis of our Clients' needs. When creating dedicated solutions, we place emphasis on ensuring their compliance with the strategy and business goals of our Clients, as well as with current laws and regulations. In our projects, we use our diverse experience and extensive business and technical competences, which allows us to provide optimal solutions tailored to the individual needs of our Clients. Our solutions not only generate added value, but also improve the efficiency of our Clients' business processes.

WHAT OUR CUSTOMERS SAY ABOUT US

Jacek Jółkowski
Franchise & Business Projects
Manager
Rex Concepts CEE

Thanks to the cooperation with DRL, we have implemented a financial reporting and management by Goals system for 2 brands in 3 countries in record time and efficiency. A huge benefit of working with DRL was not only the development competences, but also the extensive business knowledge (valuable suggestions) on the part of DRL as a Partner. The DRL team is very responsive and consists of enthusiasts; moreover, the process of making decisions, assigning people to individual stages of the project and introducing possible changes was very agile.

David Millan, Ph.D.
Chief Data & Analytics Officer
B2 Impact ASA

Over the last couple of years, DataRiseLab has been a key, trusted partner in data, BI and cloud technology for B2I. Their experts have been instrumental in helping B2 Impact modernize its core data processes, group BI platform, valuations tooling and cloud infrastructure. Apart from their strong tech and data expertise, they also count with experienced project managers and business analysts that will augment your internal resources to deliver complex projects and programmes. If you are planning to transform your core D&A capabilities and challenge the status-quo, DataRiseLab should be your partner of choice.

Alf Ph. Bjørcke
Head of Portfolio Analytics Europe
B2 Impact ASA

I've been working with DataRiseLab for more than a year on various projects. Kamil, Marcin and team biggest strength is their client empathy, meaning their ability to understand me as a client. Not only what I need but also why I need it. They're good at asking questions, which means I can trust to receive what I ask for, on time and at agreed cost. They are very professional and easy to work with. It is my pleasure to recommend DataRiseLab.

IT Project Manager
Large e-commerce furniture retailer

I cooperated with DataRiseLab (DRL) during the PoC Data project as a Project Manager on the client's side. The goal of the project was for DRL to make a sample report that already exists in my organization and show how to quickly connect raw data, process it and finally visualize it in an interesting way. This task provided us with information on whether this technology is for us and what implementation and maintenance costs it can take into account in the future. During this project, DRL showed a very agile and project-based approach to tasks, as we had 2 months to complete everything (from signing the order to obtaining a quote for a potential implementation). As a PM, I was invited to join the DRL project team and we coordinated the entire project with the PM from their side, which shortened the response time, eliminated the so-called deaf phone, risks were articulated immediately and minimized. The materials resulting from the tasks in the project were prepared with the highest quality and were systematically presented by DRL to the Business Stakeholder, which allowed for a better understanding of the technology. On the DataRiseLab website, you can find the sentence "Everything starts with data and we know how to manage it". What they have written is true, because they have proven it more than once. In view of the above, I recommend cooperation with DRL.

SELSEY

Beata Mycer
CTO
Selsey Sp. z o.o.

We hereby confirm that DataRiseLab has conducted a Proof of Concept of data architecture and reporting platform based on Microsoft cloud technology at our company. The PoC included, but was not limited to: preparation of infrastructure in Azure, analysis of business requirements and source data, implementation of a data warehouse in the cloud, integration with selected data sources, including Google Analytics, preparation of data structure and processes, including ETL, selected reports in BI and data models, launch of agreed sample applications in PowerApp, preparation of data governance, training for end users, preparation of necessary documentation. DataRiseLab Sp. z o.o. demonstrated professionalism and reliability during the project. It is noteworthy that the partner demonstrated not only knowledge of technologies and good practices in their implementation, but also understanding of business aspects. In view of the above, we can recommend DataRiseLab Sp. z o.o. as a trustworthy partner.
