Simplified modern authentication at the printer
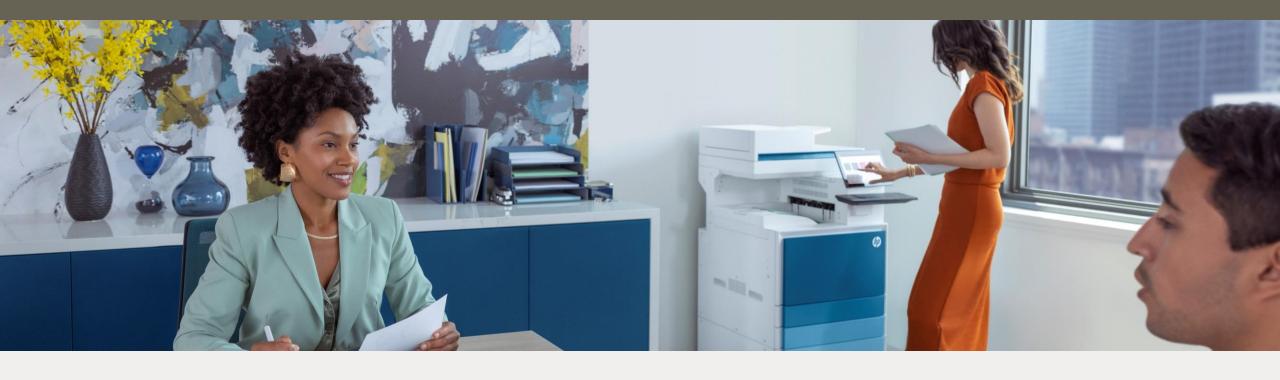

HP Authentication Manager

Connect your existing identity management system to the printer.

Flexible implementation options

Consume as SaaS or self-host.

Maintain control

Authentication flow is presented through your Authenticator of choice

Data privacy

End user data is not duplicated or manipulated during the authentication process.

Secure communications

All communication is secure to minimum TLS 1.3 and AES 256 encryption standards.

Simple setup

Quick setup and validation process ensures fast implementation and time to value.

Bring modern authentication to your print devices

1 Migrate away from RFID card technology to embrace modern protocols that support mobile-driven authentication flows.

2 Enable reader-less authentication technology through mobile devices without requiring an RFID reader.

3 Provide a consistent authentication policy that brings the same authentication experience and security controls for your PCs to your print devices.

4 Support compliance and privacy obligations with the ability to control the authentication flow at the device level with zero duplication of data.

5 Confidently meet strict compliance and data privacy requirements by leveraging the ability to self-host the platform.
