What is SiriusBOT built to do?

Features of SiriusBOT

Analytics on Dashboard

Get the usage analytics of your user behaviour with the most relevant metrics on the dashboard of SiriuBOT.

BI Reports on Chat

Get your Power BI KPIs and reports on any channels of the bot's chat interface withing seconds, anytime, anywhere.

Easy Intent Management

SiriusBOT is smart enough to understand the intent of users and enables you to completely manage them from the backend.

Unanswered Query Management

Identify the unanswered queries by the bot and train it to become smarter for your users, with every interaction.

Guided conversations

The bot can initiate conversations by asking relevant queries to the user to keep the conversation flowing by employing advanced NLU technology.

Multimedia support

SirusBOT makes conversations engaging by sending media in different formats like videos, PDFs, images and tabular or pie chart reports.

Engaging conversation formats

The bot asks queries and answers in multiple formats, from asking multiple choice questions to suggesting queries as users type.

Connections to Multiple Databases

The platform allows you to connect to multiple data sources to fetch all your information in a unified chat.

Switch User Roles

The platform lets you configure user roles and switch them within the same chat window to attend to multi-function conversations for the same user.

Multilingual Conversations

The bot platform is developed to support multiple languages in order to maximize conversations for different geographies.

Why SiriusBOT?

Power of Collaboration

It enables your people to perform mundane tasks from your ERPs, CRMs and any other enterprise applications through a simple chat interface, essentially taking away the complex and tedious workflows.

Multiple Channels and Platforms

IT allows your audience and team members to chat on their favourite chat platforms including, Microsoft Teams, WhatsApp, Facebook Messenger, Telegram, Facebook Messenger and any other mobile or web apps.

Easy Integrations

Anyone can integrate the chatbot with existing IT environment from a simple and intuitive backend. It is designed to reduce redundant integration efforts through a simple dropdown interface.

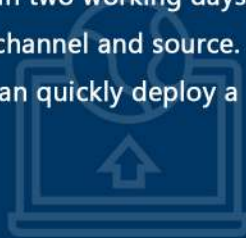

Intuitive and Beautiful UI

The chatbot platform looks as good, as it performs. The simple, intuitive and beautiful UI allows any user to familiarize with the platform and set it up for any required functions within minutes.

Quick Deployment

The chatbot can be deployed within two working days in any given environment for any channel and source. Anyone function, in any industry can quickly deploy a chatbot at the speed of thought!
