Data Tower

About

BI Ops application focused on monitoring data environments to ensure more efficiency in analyzing operational data related to the usage of the tool.

Check out our benefits

Cost optimization

Data Tower offers insights into user behavior and license usage within your Power BI environment, enabling you to determine whether users are utilizing their Power BI PRO licenses.

It also simplifies monitoring tasks for the technology management team and helps reduce costs associated with unused licenses.

Operational efficiency improvement

This solution helps teams work more efficiently through task automation, monitoring and providing valuable insights for work environments.

Productivity and convenience

Data Tower consolidates all information from your Power BI environment automatically, allowing constant monitoring, quicker response to critical events, and environment management.

Valuable indicators

The dashboards provide valuable insights into the Power BI environment, enabling the identification of bottlenecks in automatic updates and optimization opportunities for reports by assessing development best practices.

Holistic view of workspaces

For managers who need to stay informed about critical data related to workspaces, Data Tower can be an essential application to ensure resources are utilized effectively.

Identification of standout workspaces

Data Tower enables managers to identify the most accessed workspaces, highlighting their relevance to users and the need for dedicated monitoring.

Analysis of underutilized workspaces

Identifying workspaces with low utilization rates is crucial for reassessing their value and for maintaining an optimized Power BI Service environment. This ensures it remains free from unnecessary overhead.

Detection of issues and failures

Data Tower also monitors workspaces with the most report update failures. By identifying them with unsatisfactory performance, managers can take proactive measures to address technical issues both in the environment and in existing reports.
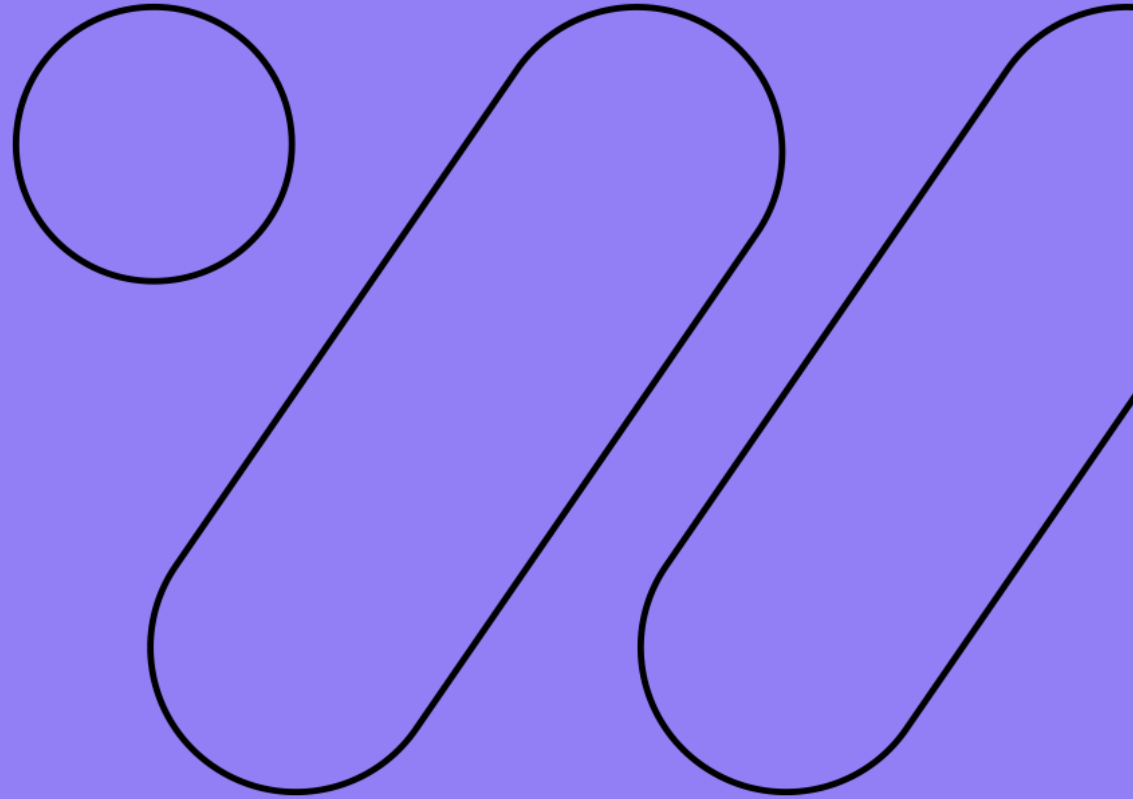

Personalized consulting

We can provide personalized consulting for companies looking to develop customized ways of using data workspaces, with data and business experts who understand how to enhance outcomes with data-driven solutions.
