

SQL Server migrations to Azure

Datavail's expert DBAs can methodically plan and execute SQL Server migration to Azure allowing effortless scalability and cost savings. We leverage automation and our technology to make SQL Server planning and implementation as streamlined and headache-free as possible

Migration + Optimization = Cost Savings

Our expert DBAs stick around long after the migration is completed, providing performance improvements to help increase database availability, reliability, and recoverability.

Why customers use Datavail

- 100+ Successful Migrations
- 200+ SQL Server DBAs Worldwide
- 17+ years delivering database services and support
- 7+ Cloud Experience
- 500+ Customers
- 200,000+ Databases Managed

Discover

- Discover the SQL Server instances and environment specifics
- Run Upgrade Advisor to find and fix issues in your databases
- Application Database dependencies
- Microsoft Assessment and Planning (MAP) toolkit

Plan and Target

- Assess the discovered workload requirements and any dependencies
- Migration downtime
- Define security requirements
- TCO
- Microsoft Data Migration Assistant (DMA)

Migrate and Optimize

- Migration window and downtime
- Fix issues highlighted by DMA
- Test Database for issues
- Create New DR Plan and maintenance plans
- Restructure workloads
- Right sized
- Explore New features

Datavail sets the bar for a managed services partner and helped us improve operations, lower costs, and provide a better working environment for our employees.
