

## Azure Database for MySQL and MariaDB: Consulting Offering

As the complexity of modern database deployments increases, more and more enterprises are deploying MySQL and MariaDB Database as a Service (DBaaS) environments on Azure.

DBaaS environments do require support and only experts know - how to guarantee the best performance. Datavail Support helps you successfully navigate that complexity even within the cloud. Augment your existing team so you can focus on more strategic business-oriented initiatives

Database environments can be complicated by poorly optimized queries, slow response times, unlocked security and improperly configured settings. These problems can mostly go unnoticed, waiting for queries, and frustrate users with latencies and delayed responses. Datavail Support for MySQL and MariaDB provides highly responsive, effective, and affordable options to ensure the continuous performance of your deployments.

### Support for Database migration and modernization of opensource databases on Azure.

Datavail offers both Professional and Managed Services options helps you maximize resources while minimizing costs. Our expert team is available 24x7x365 to support your MySQL and MariaDB Database on Azure

- Ensure your database instances are running optimally
- Ensure you have a secure and optimal database configuration
- Assist you with leveraging and using new features and functionalities
- Implement best practices for high availability, performance, and security aspects
- Planning for your database scalability needs and prepare for growth
- Work with you to identify and resolve performance problems caused by design, queries, schema definitions, and indexing strategies
- Increase development and operational productivity
- Reduce your operational and support costs
