

# PostgreSQL Services

The powerful and popular open-source PostgreSQL database management system is proving its worth to users all around the world, due to its best-in-class, business-first attributes. Being vendor-neutral, it doesn't require licensing agreements or clumsy single-company contracts; being free, it keeps your costs down, too. And developers love it, because it incorporates so many types of data, and its global developer base provides unmatched reliability and flexibility.

With robust database management capacities, PostgreSQL is already adept at absorbing the explosive growth of data sources, streams, and types, and equally exploding costs of managing and maintaining them.

## PostgreSQL DBA Support Services

Datavail's expert services support your PostgreSQL usage for both projects and managed operations, freeing you to focus on the more critical nuances of your enterprise.

Maintaining your database also means maintaining the health of your company. Datavail's standard services for database management include all aspects of the database life cycle:

- Cost effective 24x7 DBA coverage
- Health checks
- Replication
- Migrations
- Technical remote DBA support services
- Database consulting
- Database upgrades
- Database performance tuning
- AWS EC2 implementation management and configuration
- AWS RDS & Aurora setup and support
- Conversions from other platforms to PostgreSQL
- AWS Redshift support and performance tuning
- PostgreSQL scaling for enterprise performance
- Azure PostgreSQL migrations and management

## Work with a Trusted Partner
