# Control: External File Sharing Management in Real Time

## Challenge

**Don't let sensitive data get into the wrong hands.**

Organizations are exposing themselves to significant data breaches due to the increase in files shared externally.

The current lack of visibility and control over this growing activity results in harmful access of sensitive data by unauthorized third-parties, jeopardizing secure collaborations.

**Know what's been shared and revoke access to what shouldn't have been.**

## Solution

Secure collaboration by having full visibility and a centralized control on all files shared.

- 1 Automatically identify all files shared with third-parties via collaborative tools for sensitive data
- 2 Dynamic dashboard displaying sensitive files shared with external users
- 3 Receive timely alerts on risky file sharing
- 4 Revoke access to these files from unauthorized third-parties
