

Deploy Microsoft Intune for Mobile Device Management

HIGHLIGHTS

- **Simplify Device Management:** Manage iOS and Android devices, supporting BYOD and corporate-owned setups.
- **Protect Information:** Secure data with encryption, DLP, and containerized mobile access.
- **Enhance Access Control:** Implement conditional access policies to guarantee that only compliant devices can access corporate resources.
- **Boost Security:** Gain visibility into device compliance and leverage automated remediation.
- **Simplify IT Operations:** Simplify the complexities of device management.

ABOUT DAYMARK

Daymark Solutions excels in creating sophisticated technology solutions, specializing in addressing complex business challenges through expertly designed systems. Their highly skilled architects are adept at crafting well-architected solutions that seamlessly integrate cloud and data center technologies. By combining these technologies, they create robust, scalable and secure systems tailored to meet their clients' unique needs.

Optimize Mobile Device Management and Security with Microsoft Intune.

OVERVIEW

Organizations adopting flexible work models face critical challenges in managing and securing mobile devices that access corporate resources. Without a robust device management solution, companies are exposed to risks such as unauthorized access, data breaches, and compliance failures.

Daymark's Microsoft Intune for Mobile Device Management (MDM) implementation provides a comprehensive solution for configuring, managing, and securing mobile devices across the organization. Leveraging Microsoft Intune, companies can streamline device management, enforce security policies, and control device access from a centralized portal, all while meeting industry standards for data protection.

Our approach begins with an in-depth planning and design phase, assessing current mobile device usage, security policies, and compliance needs. This initial assessment helps us identify key business drivers and develop a deployment plan tailored to the organization's requirements. Intune policies are configured for device compliance, conditional access, and application protection during the enablement, testing, and pilot phases. Policies are validated on IT and business devices through staged deployments to ensure that the setup aligns with business needs and security standards.

Once the pilot phase is complete, the phased production rollout begins, with Daymark providing guidance and support throughout the process. By implementing this structured approach, organizations can confidently manage mobile devices, enforce consistent security measures, and protect against evolving cyber threats, creating a secure and compliant mobile device environment.

OUTCOMES

Daymark consultants will:

- Deliver a set of Intune policies configured and deployed for mobile device management, covering compliance, security, and application management.
- Ensure only compliant mobile devices can access the M365 environment by providing reports, highlighting device compliance status, conditional access policy results, and security posture across enrolled devices.
- Create a comprehensive guide to the applied Intune configurations, including device management policies, application protection, and security settings.
- Provide Admins with knowledge transfer throughout the implementation during working sessions and in a final 2-hour Intune training session towards the end of the project.

AGENDA

Workstream 1: Planning and Design

- **Objective:** Develop a tailored Intune deployment plan aligned with customer needs.
- **Activities:**
 - Review the environment, endpoint security, challenges, goals, and expectations.
 - Introduce Intune's capabilities, portal, and key policies.
 - Define timelines and milestones and set expectations for design reviews.
 - Document deployment plan, review with the customer, and obtain design sign-off

Workstream 2 Enablement, Testing, and Pilot

- **Objective:** Configure, validate, and pilot Intune policies to ensure rollout readiness.
- **Activities:**
 - Set up compliance, app protection, and restriction policies; stage apps for deployment.
 - Deploy mobile devices for testing with checkpoints for remediation.
 - Perform check-ins and finalize the rollout plan with a Go/No-Go meeting.

Workstream 3: Rollout

- **Objective:** Execute initial rollout and ensure successful rollout of production phases.
- **Activities:**
 - Initial production rollout of mobile devices with Daymark assistance.
 - Oversee ongoing deployment as customer proceeds with additional rollout phases.
 - Final customer review to address open items and formally close the project.
