On-Premise File Sharing

Solution for Enterprise

Easily exchange files from your servers using ShareFileSafe. Upload files to your in-house server and share password-protected links to external clients or within your organization. Maintain complete control over sensitive data without relying on public cloud services.

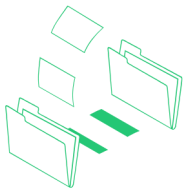
ShareFileSafe simple solution with powerfull features

Security

All data is secured in-transit with SSL/TLS encryption. Share files with customers and partners via HTTPS links. Every link is anonymized and can be protected by password and second factor security code.



Fast Deployment and Integration

Deploy on IIS web server application with MS SQL Server database using On-premise server, AWS or Azure. ShareFileSafe integrates with exisiting IT infrastructure so all users can access it using same Active Directory credentials.

Control and Peace of Mind

Fully control every aspect about shared files. Configure expiration date to seconds and set how many times shared file can be downloaded. Monitor files, link usage and operations through email notifications, file list and reports.

Simple with no Limits

There is no limits when it comes to file size or number of users that you share files with. Use MS Outlook plug-in for quick and easy attachement to link conversion or upload files using web browser.
