Dedalus Threat Protection Implementation

A complete Microsoft Security products implementation that companies can use to secure email, data, devices, and identities against the risk of cyber threats.

This solution makes a complete threat analysis and the implementation of the Microsoft security products as Microsoft Defender and Sentinel. This solution will help companies mitigate potential risks and swiftly react to any occurring issues.

What is Dedalus Threat Protection Implementation

The Dedalus Threat Protection Implementation is the first line of defense to mitigate threats against your cloud environment. As we know, cybersecurity has become one of the most critical issues today and emphasizes the importance of Microsoft Threat Protection solution implementation.

Based on customer IT landscape, we will recommend the best implementation scenario to make sure the security system meets their objectives and provides an advantage to business.

With Dedalus Threat Protection Implementation customers will have a strong defense against cyber attacks and will be able to mitigate potential risks and swiftly react to any occurring issues.

This solution is recommended for all types of customers.

Why customers use Dedalus Threat Protection Implementation

Having a specialized partner to accompany the entire process of Threat Protection Implementation to Cloud Computing environments has become essential not only to ensure the success of projects, but also to mitigate security risks.

Advanced Security benefits

- ✓ Automatically block attacks;
- ✓ Prioritize incidents for investigation and response;
- ✓ Autoheal assets;
- ✓ Mitigate potential risks;
- ✓ Empower rapid response;
- ✓ Secure all clouds and platforms;
- ✓ Integrated security tools;
- ✓ Minimize ransomware attacks.

How Dedalus Threat Protection Implementation Services works to achieve business benefits

Security Threat Landscape Analysis
