

# Transform your Security Operations with Copilot for Security

Microsoft Copilot for Security is transforming the way organisations identify, detect and respond to security incidents. This readiness assessment will give you the insights to adopt the new era of security operations.

Microsoft Copilot for Security will forever change security operations, but there are several key steps for organisations to take before embarking on the adoption of this technology. The Copilot for Security Readiness Assessment will ensure your organisation is prepared to embrace this new way of working.

Assess the readiness of your organisation to embrace Copilot for Security and using generative AI in security operations.

Gain ready-to-use insights on how Copilot for Security will allow your organisation to increase your detection, response and investigation processes to further enhance adversarial threat protection.

Identify any gaps in your current Microsoft Security & Compliance configurations aligned with Industry cybersecurity frameworks to ensure your organisation is ready to adopt Copilot for Security.
