

Health monitor

Measure and optimize overall system health and performance.

When performance is measured, performance improves. When performance is measured and reported, the rate of improvement accelerates. With this in mind delaware had created the health monitor which will report on all aspects of your ERP application. Get real insights in how your system is used, where bottlenecks take place and where you can further optimize to increase efficiency.

5 key pillars to get insights

Usage

Gain real-time insights into the usage patterns of your system. By analyzing which pages are most frequently accessed and identifying the users who interact with them, you can effectively prioritize your optimization efforts. This data-driven approach ensures that you focus on the areas that will have the most significant impact, enhancing overall system performance and user satisfaction.

Reliability

Gain a comprehensive overview of your system's reliability by obtaining detailed insights into error messages and the users who encounter them. This enables you to take appropriate and timely actions to address any issues. Additionally, you can monitor overall system availability and generate reports on the uptime of both your ERP and other connected solutions.

Responsiveness

Gain valuable insights into your system's performance by identifying which pages, actions, and integrations are perceived as slow by your users. By analyzing user feedback and performance metrics, you can pinpoint bottlenecks that hinder efficiency. This understanding allows you to take necessary actions to optimize system performance, ensuring a seamless and responsive user experience.

Key business scenarios

Gain valuable insights into the performance and follow-up of critical business scenarios within your organization. By closely monitoring these key areas, you can ensure the continuity and stability of your business operations. This proactive approach allows you to identify potential issues early and take necessary actions to maintain optimal performance and efficiency.

Key benefits

- Real-time insights
- Proactive monitoring
- Business critical dashboarding

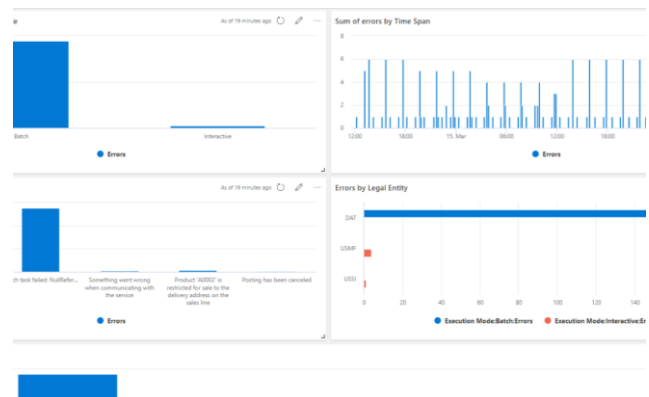

Smart detection & alerting

Smart detection and alerting provide significant benefits for businesses. By using advanced algorithms and real-time data analysis, these systems can identify issues early, ensuring timely intervention and reducing downtime. This proactive approach enhances operational efficiency, system reliability, and user satisfaction.

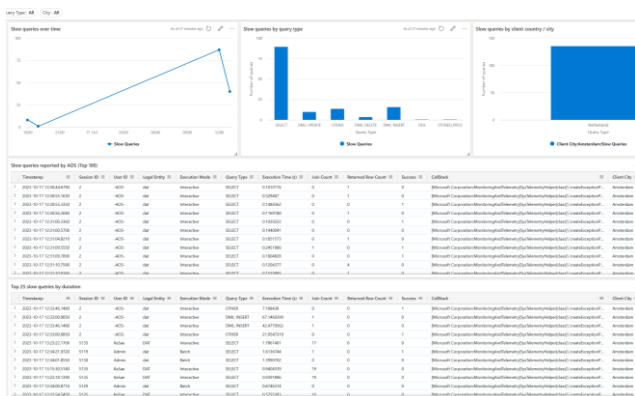

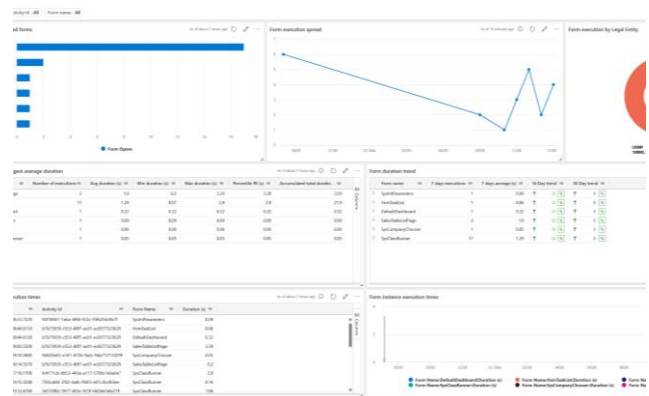

Configurable insights

Exception view

Slow query view

Page trends

One time setup fee

€ 2.500

Package installation and initial setup and configuration

Monthly usage fee

Based on full user count

0 – 30 users: € 10

31 – 100 users: € 5

100+ users: € 2,5

Conditions

- All prices excl. V. A.T
- Only applicable for production instances. Free of charge for UAT.
- Excluding additional azure costs
- Excluding proactive services
