

Introducing Basic Governance of the MS Power Platform

With the introduction of the MS Power Platform, we saw a surge of employees starting to build apps and automated processes. In connection with that, there are a number of relevant questions to ask. Who are building apps in our organization? Are they following best practices of app building? And should they? How do we maintain control of the data connections in use? - and the license need? Many companies are starting to realize that there is a need for insight and basic governance.

We offer a Basic Governance package to get started where we take you through the dos and don'ts of the platform and guide you through the basics of defining a solid governance process.

We will take you through four areas (knowledge, security, monitoring and management) which will leave you with clearly defined governance processes and insight through the CoE Power BI reports.

A Broad Horizon company

	KNOW Understand the Power Platform and governance best practices	DKK 10.000
