# descope

# Drag & Drop CIAM Platform

Descope helps organizations easily create and customize their entire user journey using visual workflows – from authentication and authorization to MFA and federated SSO. Hundreds of organizations use Descope to improve user onboarding, prevent login fraud and account takeover, and get a 360-degree view of their customer journey.

## Comprehensive CIAM platform

### 1 Complete AuthN & AuthZ

- Choose from a wide variety of authentication methods.
- Easily implement OIDC / SAML SSO.
- Add fine-grained authorization controls (RBAC, ReBAC, ABAC).
- Delegate admin to your customers with self-serve widgets.

### 2 Customizable workflow engine

- Visually create and customize user journeys in a drag-and-drop interface.
- Govern frontend experience and backend logic in the same workflow.
- Modify auth flows without touching your codebase.
- Weave in actions from 3rd-party connectors in user journeys.

### 3 Security & fraud prevention

- Add adaptive MFA to improve both security and UX.
- Enforce step-up auth for sensitive user actions.
- Stop bot attacks on your login pages with native and 3rd-party risk signals.
- Ensure secure session and token management.

| Scalable, multi-tenant architecture | Multi-region data residency | Detailed audit trails and analytics | Flexible implementation: workflows, SDKs, APIs |

# Popular use cases

### Customer AuthN / AuthZ

Add seamless and secure customer login, access control, and identity management to your app or website.

### Identity federation

Unify identities across all your customer-facing apps and route identities to the right IdP in real time.

### Strong MFA

Add risk-based MFA to enhance security without adding undue friction.

### B2B enterprise readiness

Add SSO, SCIM, granular access control, and other capabilities to move upmarket.

### Going passwordless

Improve UX and nip password-based attacks in the bud.

### Auth augmentation

Enhance your authentication flows without changing your primary IdP or user store.

# Benefits

* Frictionless, personalized customer experience

* Enhanced protection against ATO and identity attacks

* Future-proof user journeys

* Simple and flexible implementation

* Increased developer productivity and focus

* Single source of truth for customer identities

# Connectors ecosystem

### Fraud prevention

### User journey comms

### Identity verification

### Audit streaming

### Localization

### Identity orchestration

### General purpose

### Risk detection

# Authentication methods supported

**Passkey / WebAuthn**

**Magic Link**

**One-Time Password**

**Social Login**

**Time-Based OTP**

**SAML / OIDC SSO**

**nOTP**

**Password**

# Frameworks and SDKs supported

### Client SDKs

### Backend SDKs

### Mobile SDKs

### Other Frameworks

# Your auth is secure with us

**100s** of orgs in production

**1000s** of devs on free tier

**190M** identities managed

## Some of our happy customers

"Visualizing the user journey as a workflow enables us to audit and modify the registration and authentication journey without making significant code changes."

- Arkadiy Goykhberg, CISO, **Branch Insurance**

"If I estimate even for one of the projects we implemented with Descope compared to what it would cost us to build it, I think we would have saved at least 30 to 40 times the money that we're spending on Descope."

- Sasidhar Sista, Co-Founder, **GradRight**

"Our team really appreciates the empathetic and ever-present support. Whether it's regular check-ins, guidance and implementation help for unique use cases, or fast response and deployment for feature requests, we can see that Descope has our back."

- Marut Singh, CTO, **CARS24**

"The thing that really impressed me with Descope is the support. They have a wonderful team for developer support available seemingly 24/7 in their Slack community."

- John Pribesh, Founder & CTO, **Devlime Labs**
