# dbForge SQL Complete

Achieve the next productivity level

Code Quality | Application Performance | Team Productivity | Code Maintainability

# About us

We are one of the leading developers of innovative database software embraced by 40,000 companies and 500,000 professionals from more than 140 countries. Our goal is to make their daily work easier with our solutions and provide an exceptional quality of advice and support.

## Founded in 1997

For more than 25 years, Devart has been developing and delivering software products that perfectly address the needs of companies and individual users alike.

## The Focus

We create and continuously evolve database tools, ALM solutions, data providers, data integration and backup solutions, as well as web and cloud services.

## 200+ Experts

More than two hundred professionals of the highest caliber contribute their knowledge and expertise to ensure the quality and completeness of our products and services.

## Our offices

Devart's offices are located in the Czech Republic, Slovakia, Ukraine, and Hong Kong.

# dbForge SQL Complete

## SQL Coding Assistant for SSMS and VS

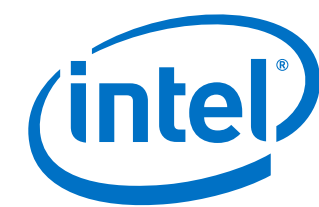

The tool provides context-aware code completion, enabling SQL developers and DBAs to write code faster.

SQL Complete is packed with useful features tailored to empower development teams to be more productive.

# Used and Trusted by Enterprises Around the World

Thousands of companies all over the globe choose SQL Complete.

# Top Reasons to Use SQL Complete

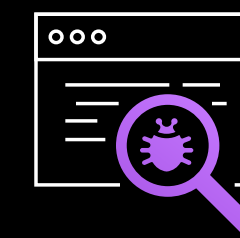

## Clean, high-quality code

Develop pure and error-free code with IntelliSense-style code-completion.

## Productivity boost

Use a rich collection of built-in snippets, modify and/or create the custom ones to double your coding speed

## Early error detection

Catch and fix errors before they get into production with the advanced T-SQL Debugger functionality.

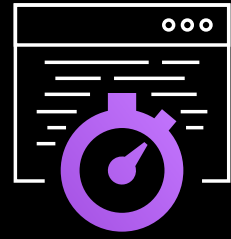

“SQL Complete is one of the greatest tools I've seen for SQL Server. Congratulation for this great tool. It helps me so much write powerful SQL statements.”

— ANDREAS FUCHS, IT Systemtechnik, Soennecken

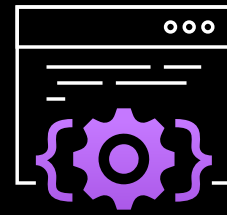

# Top Reasons to Use SQL Complete

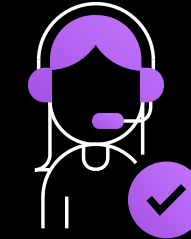

## Instant code formatting

Use a wide selection of predefined formatting styles to easily improve code readability and introduce unified code formatting standards within your company.

## Automatic code refactoring

Breathe new life into legacy T-SQL code and make it more efficient and maintainable.

## Timely customer service

We value our customers and strive for excellent service. We're fast, friendly, and we know our product inside and out.

★★★★★

“I'm a professional SQL Server developer with over 10 years of experience. I tried a lot of different SQL Server tools and IDEs and finally stuck with SQL Complete. Why? Because it has pretty much everything SQL developer needs. Snippets, intellisense, query history, smart data copy, automatic CRUD, ... I've just started. It's a great product with rich functionality. I definitely recommend it.”

— DMITRIJ KULTASEV, SQL Server Database Developer

# How SQL Complete empowers its customers

## Financial services sector

### IMPROVE WORK EFFICIENCY

With qualitative data analysis and reporting

SQL Complete boosts the speed of the BI department by allowing analysts to get the best and the most precise understanding of the database structure.

### STAY FOCUSED

With T-SQL coding assistance

SQL Complete takes care of code completion, so you can concentrate on how the code actually works.

### SAVE TIME

With Grid aggregates

The possibility to calculate aggregates in the result grid is a big time saver.

“The advantages of using SQL Complete are largely in how well it performs within the SSMS product. SQL Complete is a big time saver.”

— SAM DUVAL, Data Quality Analyst Elements Financial

# How SQL Complete empowers its customers

## Information technology sector

### 3X WORK OUTPUT

#### With Finding Invalid Objects

Detect and fix invalid objects that often appear during database development process. Used along with other features, it can increase your working output 2-3x.

### STAY IN THE KNOW

#### With Tabs Coloring

Tab coloring allows company developers to know which database they are on at a glance and thus minimizes the risk of running queries on wrong environments.

### INCREASE PRODUCTIVITY

#### With Wildcard Expansion

SQL Complete eliminates the necessity to type column names and thus boosts productivity of the team

### STOP WRITING THE SAME CODE TWICE

#### With Query History

With SQL query history, developers never lose scripts they worked with since queries are saved and you can re-use them anytime.

“SQL Complete is like SSMS IntelliSense on steroids, plus so many other features including join statement completion, tab coloring, wildcard expansion, and refactoring. I can write scripts so much faster and I keep finding helpful new features all the time.”

— KEITH RICHARDSON, Principal Software Architect Broughton Software

# What do customers think about SQL Complete?

The value you get with the Studio can be perfectly illustrated with the excerpts from the success stories kindly provided by our customers.

“We use SQL Complete every day, probably, every hour. From formatting to snippets that help build INSERT scripts for our complex reference table additions, to the simplest of snippets that speed up query writing”

**Greg Rhind**

Development Lead  
at Coyote Software Corporation

“Fewer spelling errors, correct JOINS, formatting as desired, and the SQL Query History ... It all makes my daily work easier”

**Svend Dyhr Hansen**

Software Developer  
at BookingStudio A/S

[Read Full Story](#)

“SQL Complete makes writing T-SQL significantly easier than trying to operate without it... the environment missing SQL Complete feels far less polished. SQL Complete completes SSMS”

**Dave Mitchell**

General IT Manager at Contract  
Resources (NZ) Ltd

[Read Full Story](#)

“SQL Complete is like SSMS IntelliSense on steroids, plus so many other features including join statement completion, tab coloring, wildcard expansion, and refactoring. It also gives you lots of extra data at a glance, including column data types and row counts...”

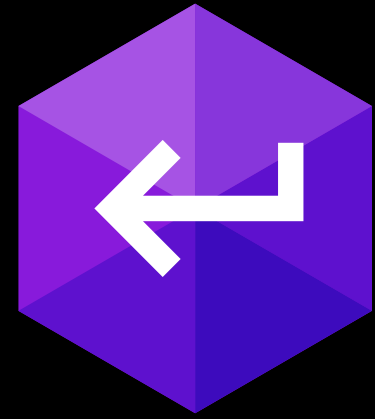

**Keith Richardson**

Principal Software Architect  
at Broughton Software
