Cloud Foundation

Creating cloud ready environments with Microsoft Azure landing zones

4-Week Implementation | 20.000€ *

Get an overview of Cloud Foundation:

Azure landing zones are Azure environments that consider scale, security, governance, network, and identity. The concept of the Azure landing zones enables application migrations and greenfield developments on an enterprise scale in Azure. In addition, it also serves as a basis for verifying existing deployments regarding best practices and, if necessary, adapting them.

Cloud Foundation represents the collection of Devoteam in building secure & scalable Azure Landing Zones based on Microsoft Cloud Adaption Framework. With Cloud Foundation Devoteam provides the collection of Azure Landing Zone architectures and best practices from many successfully implemented projects.

What do you get?

Organizational Structure & Networking

- Tenant setup and OnBoarding
- Management group and subscription design
- Naming convention
- Hub-Spoke network architecture
- Connectivity

Landing Zones & Automation

- Secure, scalable and modular
- Multi-stage deployments
- Infrastructure as Code
- Enterprise Scale Model by Terraform and Azure DevOps Pipeline

Security & Compliance

- Azure Policies
- Custom Policies
- Cloud Defender integration
- Identity Management
- Governance as Code

Logging & Monitoring

- Secure, scalable and modular
- Multi-stage deployments
- Infrastructure as Code
- Enterprise Scale Model by Terraform and Azure DevOps Pipeline
