# The Power Platform Journey

8 Weeks (40 PD)

Empower everyone at your organization with an intuitive, collaborative, and extensible platform of low-code tools that makes it easy to create efficient and flexible solutions.

« Engage, train and limit the users. »

Instead of assuming that your users know how to handle low code platforms and how to ensure that dataflows stays within the organization, get the right governance & user training from the very beginning. The goal is to use the available technical tools to ensure governance and compliance. With its high number of connectors Power Platform can be used to boost productivity but has also a potential for far-reaching security incidents.

On this journey you will learn what tools you get, how to use them and which configurations make sense to keep the productivity boost but avoid critical security incidents.

What do you get?*

Envisioning & Positioning Workshop

- Kick-Off
- Overview of Power Platform and its components
- Discuss your Business needs and resources
- Scope and planning

Initial Setup & Governance

- Initial configuration for a secure use of the Power Platform
- Creation of a governance plan for Power Apps and Power Automate

Establish Personal Productivity

- Establishment of Personal Productivity and important solutions in your company
- Rules for using Power Platform
- Building a community
- Monitoring

Continuous Support

*Please note that the pricing & timeframe is only a rough estimate and will vary depending on the services you choose, the size of the implementation and other circumstances in your specific target scenario.

The Power Platform Journey

Our Step-by-Step Approach

Step 1:	Envisioning & Positioning Workshop
Participants:	Key Stakeholder (CIO, Data Protection Officer, IT Staff)
Content:	We will give you an overview of the Power Platform, the components and the available tools to create awareness also for governance and monitoring. As with many tools it is important to be able to position the Power Platform with all pros and cons. We will give some guidance and recommendations around positioning the Power Platform as well as best practices.

Step 2:	Initial Setup & Governance
Participants:	Data Protection Officer, IT Staff
Content:	We will establish governance for Power Apps and Power Automate accordingly to your needs. We will provide recommendations how to setup a secure Power Platform environment and how to setup data loss policies which ensure that your dataflows stay within your organization.
Outcome:	An initial configuration that ensures that no data can leave the tenant.

Step 3:	Establish Personal Productivity
	Establishing "Personal Productivity" and "Important" solutions in your company. We will provide educational material for employees, users and the IT staff to make sure that every user of the Power Platform knows the rules around "Personal Productivity" and "Important Solutions". A variety of automated processes can be implemented. Additionally, several housekeeping processes can be automated to clean up unused components with the approval of their owners.

Step 4:	Continuous Support
	With the evergreen approach and continuous updates and rollouts, the Power Platform Journey never ends. We can train your staff how to operate and monitor the Power Platform and how to handle ongoing workloads around the Power Platform and its components.
