Azure Arc for SQL Server: 3-week Pilot.

Azure Arc is a Microsoft solution that enables you to project your on-premises and multi-cloud resources, such as SQL servers, virtual or physical servers and Kubernetes clusters, into Azure Resource Manager. This enables you to manage your resources as if they're hosted in Azure. With Azure Arc for SQL servers your data can stay on premise and enjoy the strengths of Azure services to govern, secure and monitor your database.

Our strategy

Complete assessment of your infrastructure

Definition of pilot SQL servers

Configuration and onboarding of the pilot resources

Definition of our rollback plan

**Deployment of the successful pilot configuration in batches**

Our Offer

During this 3-week pilot we will, together with your teams, bring the capabilities of Azure to your SQL servers. By doing so, the resulting plan will be able to create a strategy that will allow you to reach your business objectives more easily and be ready to further power your infrastructure with PaaS 2.0 services in the future.

Our approach

Our approach has been defined into 6 main stages:

List of machines in scope

Assessment & Recommendation

Target a pilot

Configuration of the agreed components

Batch onboarding of the SQL servers

Training of personnel and future steps

Additional services

- **Azure Policy**
- **Microsoft Defender**
- **Microsoft Sentinel**
- **Azure Monitor**
- **Environment health checks**
- **Advanced Data Security**
- **Azure SQL assessments**
