Secure your digital workplace

## An assessment to quickly have an overview of your security posture.

Not well prepared for the COVID19, your employees were forced to find quick and dirty solution to assure the continuity of the Business. This is the worst situation a shadow IT was created, not controlled by the company. Example: Use public video conference call, use the employee's private address, or store the company data on the personal drive.

Our solution

Devoteam offers you an agile and iterative approach to improve the security posture of your endpoints:

- We start with a workshop, auditing the as-is situation thanks to the CSAT Tool and defining the to-be. Together with you, we define a backlog of activities.
- Each activity is translated into tasks (people – process – platform). We start a two-week sprint to execute them.
- At the start of the activities, we define KPIs to evaluate possible improvements.

How to improve your Security Posture ?
An Agile Methodology focused on Continuous Improvement

What we offer

- A pragmatic and systematic result-driven approach.
- A modern security methodology calibrated on business expectations with a warranty of improving your security posture.
- An end-to-end solution covering three dimensions: people, process, and platform.
- Possibility of a managed service to continuously improve the security posture of your digital workplace.
