Cloud Enabler for Hybrid Cloud

Quickstart
With three different packages

Assessment
Current on-premisses landscape

Cloud Enabler for Hybrid Cloud provides an automated, comprehensive solution to enhance the automation maturity and effectively govern the on-premises environment using Azure as a single control plane.

This streamlined approach ensures optimized server management, compliance, and seamless integration, leading to improved operational efficiency and reduced administrative overhead. Key features include:

- Environment Assessment and Preparation
- Inventory and Change Tracking
- Log Analytics
- Compliance Policies and Monitoring
- Identity and Access Management
- Azure-based Admin Center and Customized Dashboard
- Server Update Governance and Alerts
- Universal Printing and Jump Server

Our approach

uses Azure as a unified control plane to automate the management and governance of on-premises environments, enhancing operational efficiency and compliance. It provides a comprehensive suite of features including environment assessment, inventory tracking, log analytics, and update governance, all aimed at increasing automation maturity and simplifying hybrid cloud integration.

Outcome

The Cloud Enabler for Hybrid Cloud enhances automation maturity and governance of on-premises environments. Key outcomes include:

- Improved operational efficiency
- Enhanced compliance and security
- Streamlined server management
- Reduced administrative overhead
