Power Apps Consulting services

About Power Apps

Power Apps are a set of services, data platforms and connectors that provide a low-code programming environment where organizations can develop custom applications at lightning-fast speed.

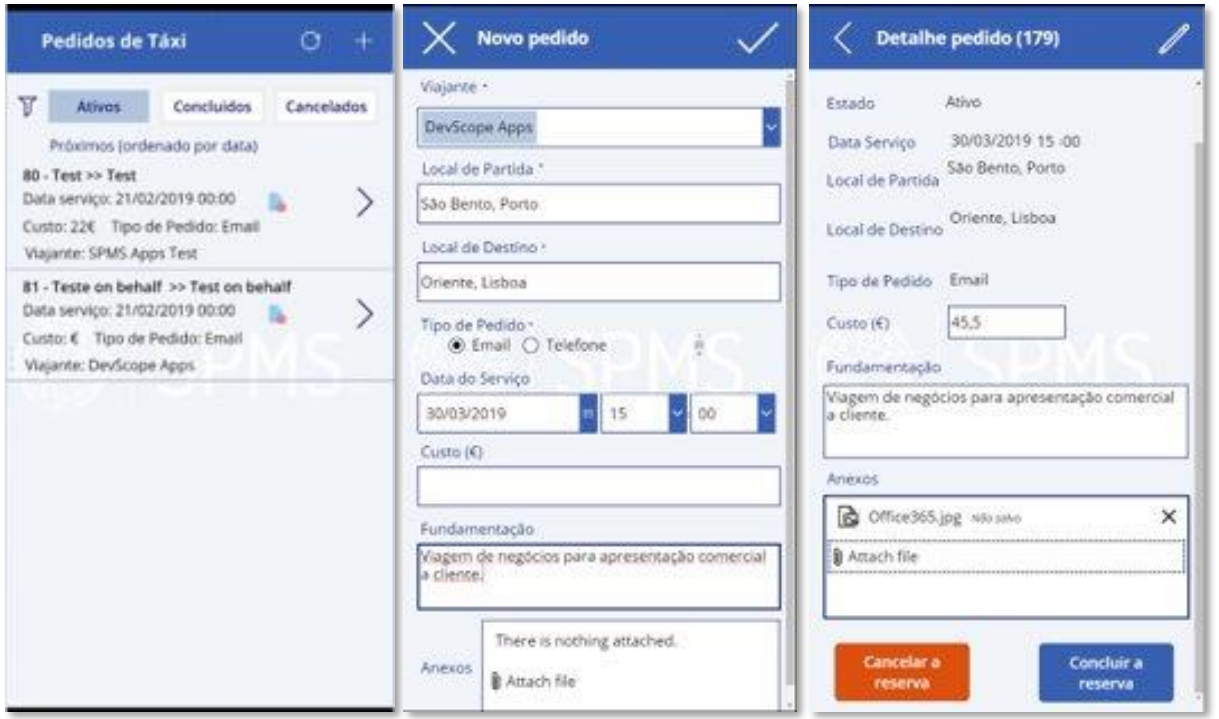
Despite having a quick development cycle, Power Apps are feature-rich and integrate seamlessly with an organization's data sources, as well as the rest of the Power Platform applications, Office 365, or Dynamics 365.

DevScope's Power Apps consulting services help your organization tackle immediate needs in record-time while empowering your team to develop their own future solutions.

SPMS – Taxi calls app

An application that centralizes the client's taxi calls.

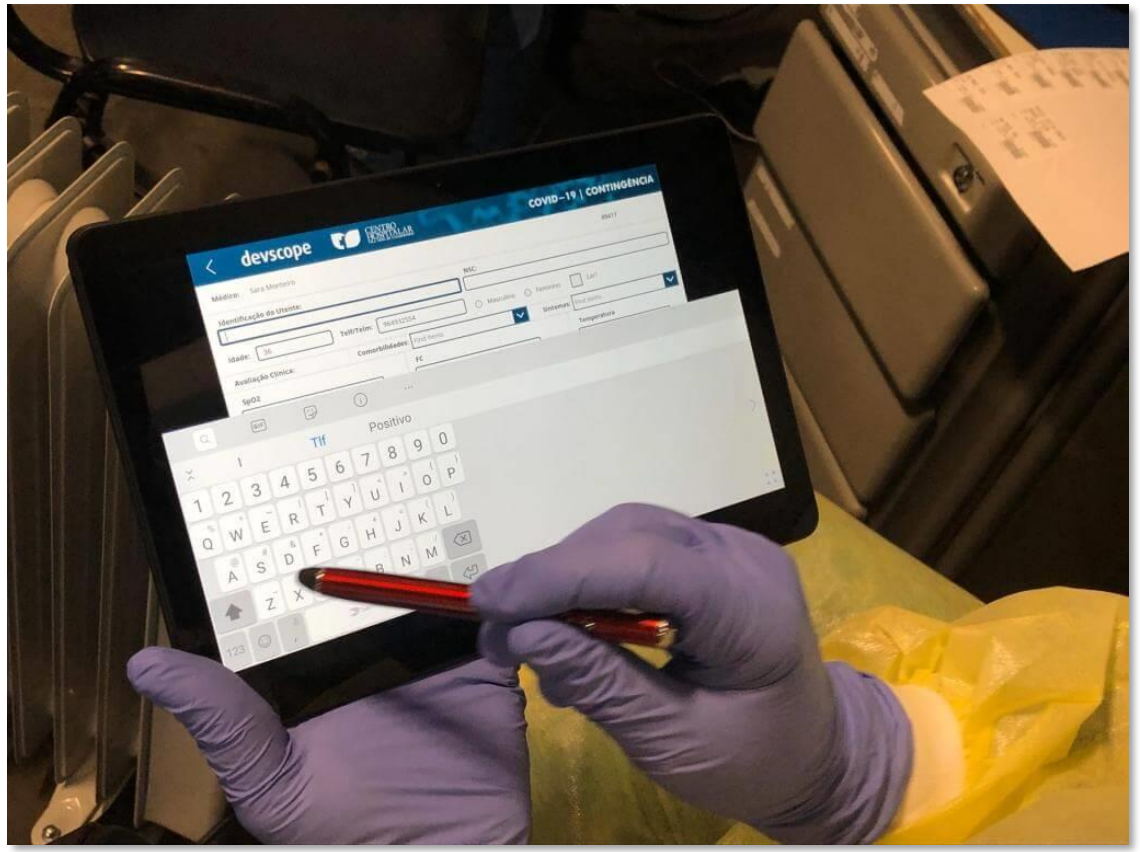
- Automations:
  - Orders take the user into account and are automatically associated to the Direction and Coordination departments. Historic remains even if the user changes departments
  - Access control/order visibility.
  - Emails are automatically sent to the departments and the taxi center.
- Ability to place orders on behalf of other users.
- Ability to annex documents to the order, such as invoices.
- Available as a Mobile PowerApp and a SharePoint integrated web version.



CHVNGE – Covid-19 Power App

A Power App that mirrors the paper form used to collect patient information in the hospital's COVID-19 sanitation tent.

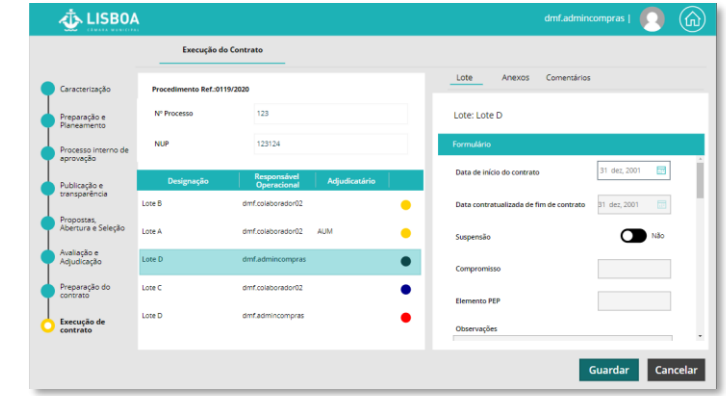
- Connected to COVID-19 monitoring Power BI dashboards, allowing data to be processed, stored and analyzed in real-time.
- Patient influx is monitored in real-time and supports the medical decision.



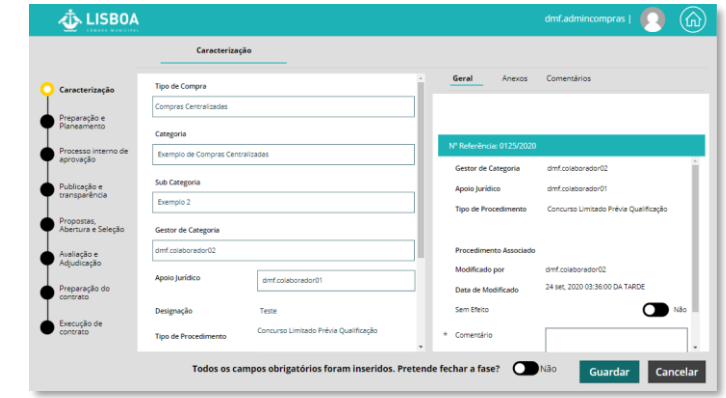
CM Lisboa (City Council) – Public Contracts Management Power App

A Power App that replaced an Excel file used by approximately twenty people to manage procedures related to public contracts of the Lisbon City Council.

- Connected to SharePoint Online to manage the documents of each public contracting phase.
- Linked to Power BI dashboards, allowing data to be processed, stored, and analyzed in real-time.



Creating and characterizing procedures



Preparing the data for the contract phase

Sonae Fashion/Zippy – Product datasheets printing

An App that generates product datasheets in order to be printed. The app replaced an Excel file with macros used by all store employees.

- Connected to SharePoint Online where all product data is stored and synchronized from the store's merchandising system.
- All product sheets have updated data, prices, and photos, even if they are on sale.

Previewing of the product datasheet in order to print it

Searching and selecting products

Logoplaste – Booking virtual guided tours

A Power App for booking virtual guided tours at Logoplaste plants around the world. The user selects the plant and the date and receives an email confirming the enrollment.

- Connected to SharePoint Online where each plant can access its booked visitors list and manage the plants and dates available.
- All the bookings are confirmed by email with the help of the Microsoft tool Power Automate.
