PowerBI Portal

Cost-optimized Power BI sharing tool.

Share more for less

PowerBI Portal democratizes business intelligence by removing limits on the number of Power BI reports you can share and the users you can share them with. Thanks to Power BI Embedded, reports are fully available and interactive on an online portal with limited, customized access.

PowerBI Portal means more Power BI report sharing, with more people, at a lower cost than ever.

Customers use PowerBI Portal to:

- Provide a centralized access point to their organization's reports and dashboards.
- Share Power BI reports and scorecards with people outside their organization.
- Share Power BI reports and scorecards with users without a Power BI account.
- Add and extra layer of security to their reports and dashboards.
- Lower their Azure costs.

| Problem: provide widespread custom access to Power BI reports	Solution: a portal with customizable access and viewing rights	And there's more:
• You need to share your Power BI reports and dashboards with clients and other people outside your organization • You need to filter the information each user has access to • Your clients and employees need constant and centralized access to your reports	• Customize the access to your organization's reports and dashboards • Provide access to users outside your organization and without a Power BI account • Apply custom filters to ensure each user only has access to the information pertaining to them	• Optimize your Azure costs by setting up a refresh capacity for your reporting service • Add two row-level security layers to your reports • Flexible login: let users access your portal using a Microsoft, Google or Facebook account

- A single PowerBI Portal license is enough to power any organization regardless of size
- Organizations only need 1 Power BI Pro license to start using PowerBI Portal
- A Power BI Embedded subscription is required to use PowerBI Portal

PowerBI Portal

Report sharing according to your needs

Unlimited Power BI report sharing

PowerBI Portal lets you embed any Power BI reports and dashboards on an online portal and give access to it to an unlimited number of users, even if they don't have a Power BI license.

Extra users at no extra cost

PowerBI Portal lets you share Power BI reports with any users at no additional cost. Access to Power BI Portal can be given to anyone, even if they don't have a Power BI account.

Reduce your Power BI costs

PowerBI Portal uses the capacity-based Power BI Embedded service and features a timeout option that automatically turns off a Power BI report if inactive. If activity is detected, the report is turned on again. By turning reports on and off according to user activity, PowerBI Portal ensures your company only spends what it strictly needs.

Organizations all over the world are using PowerBI Portal:

With PowerBI Portal, you'll be able to:

- Create custom portals where you can share unlimited Power BI reports with anyone, regardless of being in your organization or even having a Power BI account
- Tailor the information available to each user you share your report with by applying custom filters
- Reduce your cloud hosting costs by only spending while your reports are active

Why DevScope?

DevScope is a consulting and software development company specializing in helping clients of all sizes and sectors stay competitive and get over both market and organizational problems. We implement agile and scalable solutions in multiple areas, including Digital Workplace, Machine Learning and Business Intelligence.
