PowerBI Robots

Your dashboards and reports delivered everywhere

About

PowerBI Robots is a Robot Process Automation (RPA) tool that automatically takes high-resolution screenshots of **Power BI** reports and dashboards and sends them anywhere and to any number of users as an image or PDF file.

PowerBI Robots can send scheduled reports via email, to a **SharePoint** library, a File System or the cloud, allowing **Power BI** reports to be accessible to anyone, anywhere and on any device.

Automate Power BI reports

Fully automate your company's reporting needs by scheduling **PowerBI Robots** to run at the frequency that best suits your company's needs, be it every week, hour, month, etc.

At the time of your choice, **PowerBI Robots** automatically takes high definition screenshots of your **Microsoft Power BI** dashboards and reports, and continuously sends them as images or PDF files by **email**, to a **SharePoint** library, a **file system** or any browser.

Thanks to Robot Process Automation (RPA), all you need to do is tell **PowerBI Robots** what info you need and when you need it and it will take care of delivering it like clockwork.

Send Power BI reports to anyone

PowerBI Robots allows you to routinely send playlists of reports from multiple workspaces to as many people as you want, from or outside your organization, regardless of being **Power BI** users.

Because data overwhelm is as bad as not enough data during the decision-making process, **PowerBI Robots** also allows you to dynamically **filter** your reports, so different metrics are sent to different recipients from the same **Power BI** report.

In a business comprised of different areas, **PowerBI Robots** allows insightful information to flow to the right people without ever overwhelming them.

Display Power BI reports anywhere

With a single license of **PowerBI Robots**, you can send reports and dashboards to anyone, but also anywhere. Think where you'd like your report and dashboard screenshots delivered or broadcast and it will most likely support it.

PowerBI Robots allows you to export one or multiple reports as PDFs or images files and attach or embed them on an email or send them to your company's **SharePoint Server** or file system.

You can also choose to send them to the cloud and use the generated URL to display your reports wherever you want, be it a small smartphone or a huge **smart TV** screen. If it runs a web browser, it supports **PowerBI Robots**.
