QUICKSTART SERVICE OVERVIEW

DGR Systems QuickStart Implementation services offer solutions for small and mid-sized organizations and localized teams to implement pre-defined, best practice solutions quickly and cost effectively.

These services cover basic implementations of core solutions with pre-defined and highly automated steps for installation, setup, and configuration. These packaged implementations have been designed to provide a qualified baseline implementation and are an excellent starting point for many organizations.

The following outlines all tasks that are included as part of this QuickStart service engagement. Any additional work within the environment to remediate any active services to work with this solution, or to customize this solution beyond what is offered below is not included in the scope of this services package.

Service: Intune Windows Device Management - QuickStart Implementation

Day	Task(s)

QUICKSTART SERVICE OVERVIEW

The Microsoft Intune service is a Software as a Service (SaaS) solution offered by Microsoft and requires licensing from Microsoft that is separate from this agreement. DGR Systems does not operate this service, we are assisting you, our client, in the implementation of this solution in your environment. Any service issues experienced with the solution are the sole responsibility of Microsoft.

Notes and Service Limitations
- This service provides device management for Windows OS devices only.
- This service is not designed for VDI or shared device environments.
- This service does not provide for analysis of existing GPO configurations.
