UNIFIED THREAT PROTECTION FOR ALL YOUR IOT/OT DEVICES

Leverage Difenda's cybersecurity experts to strengthen your security posture. Powered by a combination of Microsoft's security solutions and the Difenda Shield platform, Difenda MXDR for OT is an end-to-end process from receiving incidents to resolution. The model allows Difenda's C3 team to monitor and respond to cloud service, endpoint, backend infrastructure, user, and email threats using out-of-the-box Microsoft 365 Security services, Microsoft Sentinel analytics, and Difenda's proprietary capabilities.

Difenda MXDR for OT Outcomes and Impact

Effectively address gaps within the network to create a solid foundation

Customized outcome-based metrics and reporting dashboards

Gain full visibility with next-generation cybersecurity

Maximize Microsoft licensing capabilities

Reduce risk with increased security program controls

Complete adoption in 6 to 8 weeks

OFFER OVERVIEW

DIFENDA MXDR FOR OT ONBOARDING

Includes everything in a standalone Microsoft Sentinel Implementation, plus implementation within the Difenda Shield platform and limited deployment support for Defender for IoT, if necessary.

MICROSOFT SENTINEL IMPLEMENTATION

A one-time professional services engagement to have Microsoft Sentinel designed and implemented by one of Microsoft's most globally-trusted implementation partners.

DIFENDA MXDR FOR OT SERVICES

Difenda's world-class SecOps-as-a-Service offering, Managed Detection & Response for OT, is an ongoing service whereby Difenda provides 24/7/365 threat detection and response services on customers' behalf, leveraging their Microsoft Security tools including Microsoft Sentinel and Defender for IoT.

WHY DIFENDA?

The crown jewel of your security operations stack needs to be set by experienced hands.

Decades of combined experience putting customer success first, It all started in 2008 with one mission:

Help our customers achieve success. Since then, we've leveraged our agile, innovative, and collaborative approach to create the powerful, modular cybersecurity suite Difenda Shield and launched several advisory and offensive security services to drive awareness and meaningful outcomes across the people, processes, and technologies that drive the modern enterprise forward.

Certified and compliant with industry-leading standards

Trust, but verify – as the saying goes. Don't take our word for it; our staff and our facilities are highly decorated by third-party institutions. Difenda's personnel accreditation highlights include:

- CISSP, GSEC, GCIH, PCI Professional
- OSCP, OSCE, CCFP, CEH, GCPT
- MS-500, AZ-500, MCSE, MCSA
- PMP, ITIL, Certified Scrum Master
- ISO 27001
- PCI DSS
- SOC 2 Type II

Operational Experience

Microsoft Sentinel is a security operations tool that requires years of experience in the cyber-trenches to fully understand best practices and pitfalls to avoid. Difenda's experience stems from its managed service division which provides cutting-edge Managed Detection & Response services leveraging Microsoft Sentinel.

Go-to partner for Microsoft Security integration and deployment

Difenda is the go-to Microsoft partner for XDR and the Defender suite of technology. Our experts work to integrate, mitigate and manage your security program with unique processes that leverage next-gen cloud technology to seamlessly reconcile, enhance, and manage assets in the Difenda Shield Portal

WHATS INCLUDED IN DIFENDA MXDR FOR OT?

As part of our MXDR services, customers can leverage both pre-defined and customer requested response playbooks covering both IT and OT environments.

Our services are designed to consider key detection and response factors such as asset sensitivity/impact and maintenance schedules to protect critical production environments

ASSET DISCOVERY

Protection starts with visibility. Powered by Microsoft's Defender for IoT, our service leverages passive network capture technology to automatically discover assets and visualize OT/ICS networks and asset relationships. This eliminates operational concerns typically associated with sensitive OT/ICS environments. This visibility is foundational to Difenda's ability to help customers secure their OT/ICS environments, but also supports operational planning and maintenance activities.

VULNERABILITY MANAGEMENT

Once assets are discovered, our services capture OT/ICS environment communication, firmware, and other integral asset vulnerability related information. With this information, Difenda's C3 team can assess an OT/ICS environment overall risk posture and work with customers to develop proactive risk mitigation strategies.

INTEGRATED IT & OT THREAT DETECTION AND RESPONSE

Core to Difenda's MXDR services are Microsoft Sentinel and the Defender suite of security products. In addition to providing customers with detection and response services within IT environments, customers can extend protection to OT/ICS environments through Defender for IoT services coupled with our MXDR-OT service offering. By adding MXDR for OT services to existing MXDR for IT services, customers receive fully integrated 24x7x365 threat detection and response services, all delivered through the Difenda Shield. As with our MXDR for IT services, customers receive the following benefits by subscribing to our MXDR for OT services:

- Threat detection and response
- Threat hunting
- Threat intelligence
- SIEM platform and use case management
- Remote incident response

SIMPLIFY YOUR SECURITY PROCESS

1. Deploy and/or review Microsoft Sentinel and Defender for IoT infrastructure.
2. Security event data flows from your SaaS and cloud service providers into Microsoft Sentinel and Difenda Shield.
3. Deploy quickly with out-of-the-box and custom integrations for popular products and services.
4. Security alerts from your endpoints, servers, and vulnerability technology are integrated into Difenda Shield.
5. Experience 24/7/365 monitoring, customized platform engineering and CMDB all under one pane of glass so you can stay vigilant and agile.

DIFENDA MXDR FOR OT

Agent-less network monitoring to safely gain a complete inventory of all your assets, with zero impact on infrastructure performance.

ATTACK SIMULATION

The ability to simulate attacks in an OT/ICS environment has traditionally been a time consuming, expensive and risky undertaking. Attack simulations are a key tactic to understand risk, ensure response readiness, and are increasingly becoming mandated by regulatory bodies. With Difenda's MXDR-OT services and Microsoft Defender for IoT, attack simulation modelling can occur quickly and continuously be updated based on factors such as environment changes or emerging threats. Where required, Difenda can also develop simulated customer OT environments through partners such as IdeaWorks (<https://www.mohawkcollege.ca/ideaworks>), allowing for more real-life attack simulations.

CUSTOM PROTOCOL AND DETECTION DEVELOPMENT

Many organizations are running bespoke or legacy technologies within their OT/ICS environments, making asset discovery and threat detection incredibly challenging. Where required, Difenda's expert's leverage Defender for IoT's Horizon development framework to develop custom protocol plugins, to ensure complete environment visibility. In addition, our Cyber Research and Response team uses several tactics to augment native Microsoft detection capabilities through our ATT&CK® driven development process.

REMOTE INCIDENT AND RESPONSE

In the event of a serious breach, advanced response services may be needed. MXDR for OT customers can leverage an incident response retainer for additional assistance - which includes a discounted hourly rate and a guaranteed initial response time. These remote incident and forensic support services are delivered primarily by Difenda's own experienced Cyber Research & Response Team. For the rare circumstances where unique specialists need to be engaged, Difenda has established relationships with trusted firms and certified professionals.

DIFENDA SHIELD IMPLEMENTATION

How Does It Work?

While the Microsoft Sentinel deployment team begins their work, we are also busy preparing the Difenda Shield for you. For each new MXDR for OT customer, we design, configure, test, and document the Difenda Shield platform to meet special requirements gathered during project discovery phase.

Once implementation is complete, your onboarding team begins the transition to operations by providing your team hands-on training with the Difenda Shield and any supporting documentation.

PREPARE

Successful projects follow a plan. Developed from years of experience, Difenda's delivery team guides new customers through a comprehensive checklist and an onboarding project manager is assigned to ensure everything is tracked and on schedule.

BUILD

Services in the Shield which leverage one or more Microsoft Security technologies (e.g., Microsoft Sentinel) are designed and implemented by trained Difenda cybersecurity and IT professionals. During this phase Difenda also creates the new customer account in the Shield platform and configures it for each service selected.

CONNECT

Once the systems are built and the Shield is ready the first telemetry data can be sent. Log sources and vulnerability scanners are configured to begin transmission. Once an asset is transmitting event log data the Shield can begin protection immediately!

VERIFY

Difenda validates that each service is operating as designed with a formal quality assurance process which includes configuring monitoring to ensure the Difenda Shield is always protecting you, 24/7/365.

FORTIFY

A series of collaborating working sessions ensure every customer hits the ground running and gets the maximum value from the Shield services after transitioning from this onboarding phase to the ongoing operational phase. These sessions include documentation delivery and knowledge transfer sessions. Our ongoing operational meetings follow a mutually agreed upon cadence.

DIFENDA SHIELD FEATURES

Account Team

Ready to support you during your entire Difenda Shield journey, your assigned account team gets to know your team and your business.

Every Difenda Shield customer will have a:

Customer Success Manager (CSM) who works tirelessly to ensure Difenda's services always meet your business objectives

Technical Account Manager (TAM) that understands the technical and operational intricacies of your environment to provide the tailored guidance for your Difenda Shield services

Project Management Office

Coordinating complex security operations activities for Difenda's enterprise customers around the globe requires consistency and precision. At the heart of Difenda's operations is a Project Management Office (PMO) that keeps things running smoothly at all times.

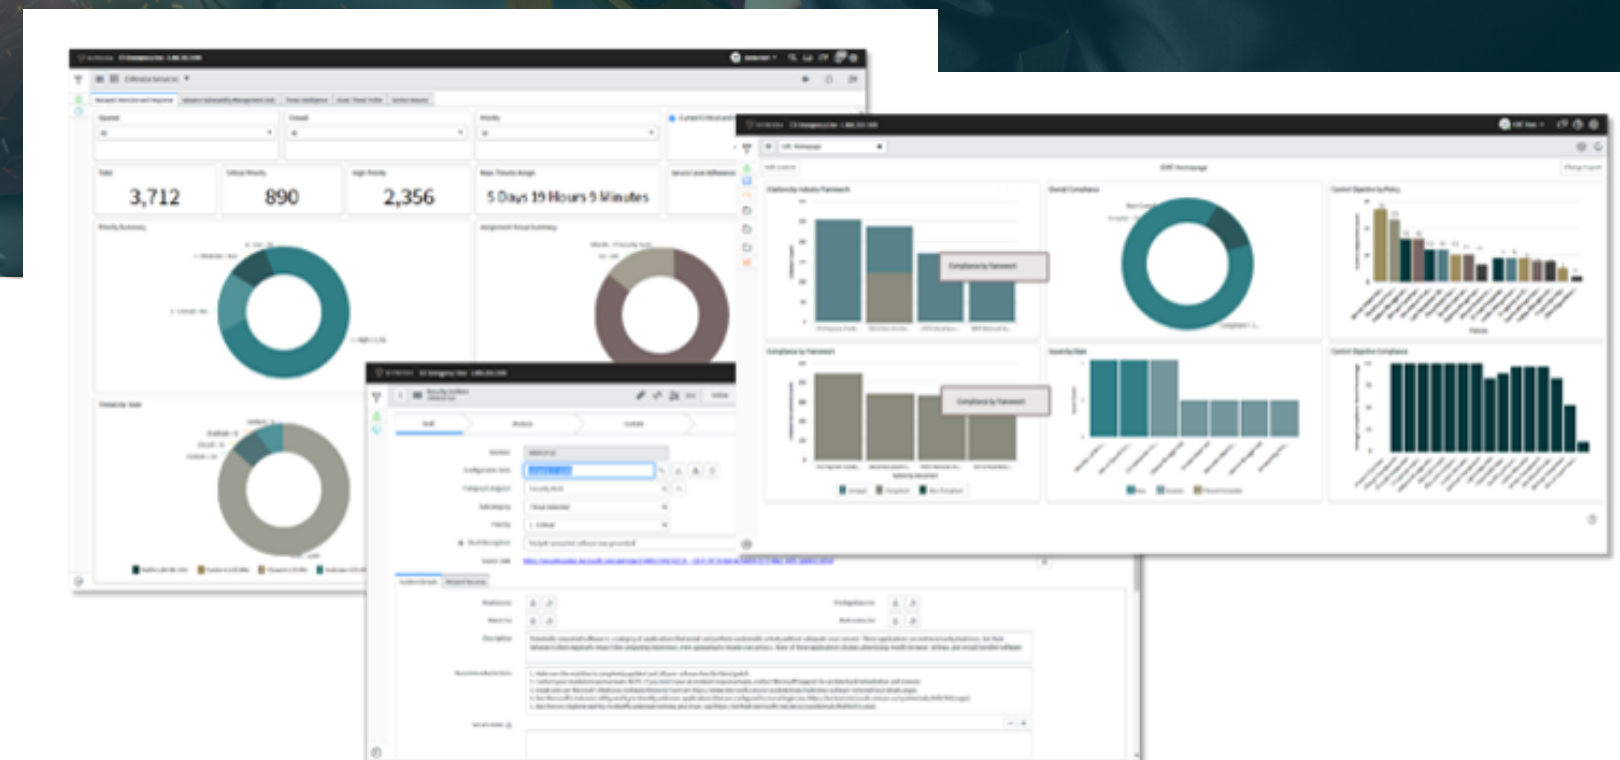

Operational Cadence

From the very first kick-off meeting, Difenda stays in sync with customers through biweekly operational meetings for the duration of services. Difenda works with customers to set a mutually-agreeable cadence to meet regularly for planning, reporting, support, and escalations.

Difenda Shield Portal

The Difenda Shield delivers a clear and flexible customer experience through the Difenda Shield portal, our secure cloud-based SecOps service application. Key features of the portal include:

- A convenient single pane of glass for all services in the Shield
- Asset discovery capabilities through for IT assets
- Real-time threat reports, including historical data for audit and compliance
- An integrated service request system for support and change requests
- Powerful and flexible dashboarding and reporting capabilities

DIFENDA

Unparalleled Expertise, Microsoft Trusted

When it comes to choosing a security partner, you need a partner who is an expert in the field and who has earned the trust of Microsoft. At Difenda, we pride ourselves on our deep understanding of Microsoft security tools and our ability to help our customers optimize them for maximum protection.

As one of the original MSSPs to join the Microsoft Intelligent Security Association (MISA), we have a long-standing relationship with Microsoft that allows us to stay ahead of the curve on security threats. We are also one of only a handful of companies to receive the Microsoft Advanced Specialization in Threat Protection and Advanced Specialization in Cloud Security, which is a testament to our high level of expertise. When you partner with Difenda, you can be confident that you are getting unrivaled expertise and support from a team that is dedicated to helping you mitigate threats and reduce risk.

And we can put that expertise to work for you!
