

DIGICERT FOR CONNECTED DEVICES

Secure, update, monitor and control your connected devices at scale.

Security for complex IoT device environments

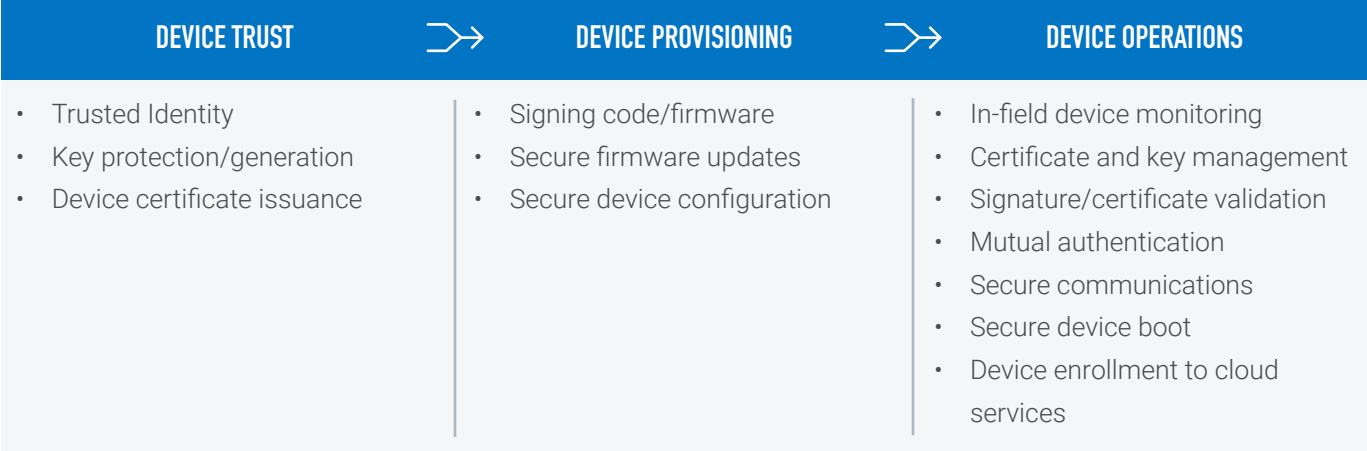

Companies investing in Internet of Things (IoT) platforms and connected devices face a host of challenges when it comes to security. There is a complex and diverse mix of hardware, operating systems, and standards. There is high variance in form factor and memory needs from small to large workloads. Once devices are in the field, they need to be updatable, and legacy brownfield devices need to be able to communicate with new greenfield units.

Solving device lifecycle security concerns

DigiCert for Connected Devices addresses these security challenges at each step of the device security lifecycle, providing customers with a means to manage device identity, secure connections, prevent device tampering, and update firmware and settings remotely and securely once in the field.

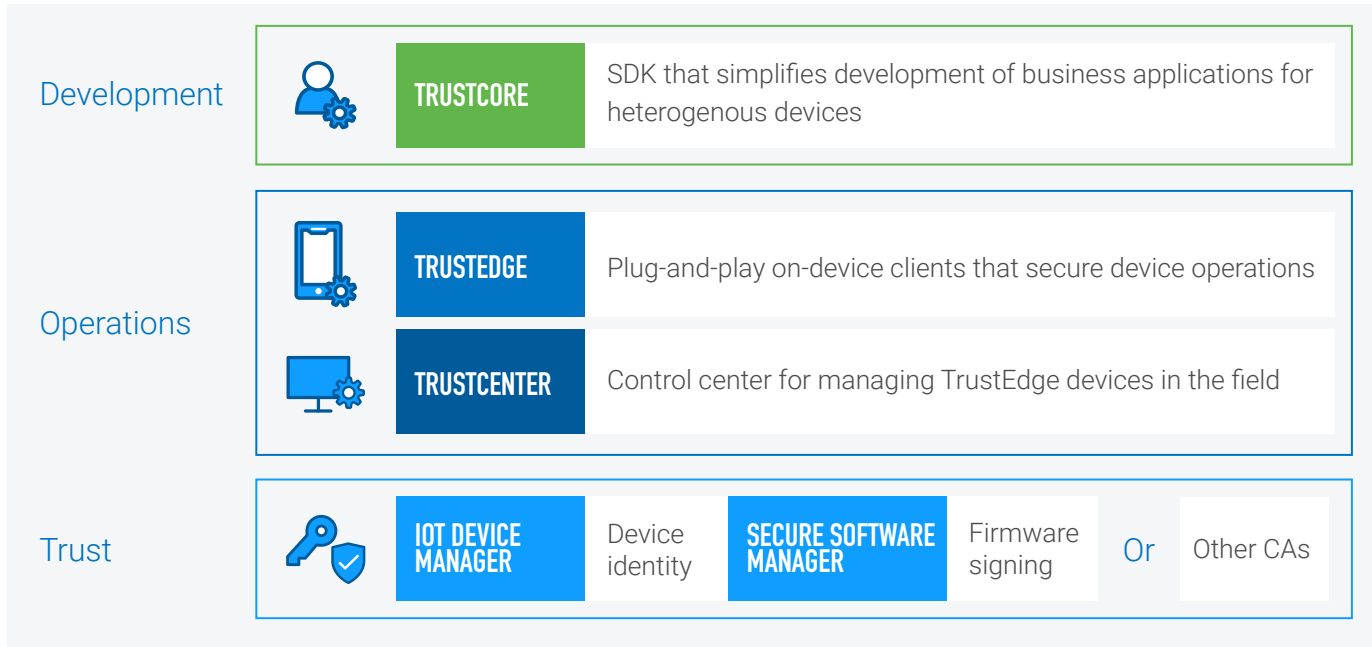

A comprehensive IoT security platform for connected devices

Solution overview

DigiCert for Connected Devices addresses the needs of developers, manufacturers, and operators, accelerating solution delivery and hardening operational security throughout the device lifecycle.

Streamline your device security

Whether you are a chip manufacturer, a device maker, or a device operator, DigiCert for Connected Devices can:

- **Simplify** - The complexity of developing for diverse environments, delivering secure updates to devices in operation, and/or ensuring device security
- **Accelerate** - Time to market, with prebuilt, plug-and-play device security applications that secure updates, communications, boot, authentication, monitoring, and more
- **Improve** – Your security posture, with security that begins with the chip and carries through to field operations
- **Enable** - The full ecosystem, aligning security strategies across the device supply and operations chain
