

Overview

For sophisticated businesses, workflows involving sensitive documents and multiple parties can result in a lack of trust. The result is uncertainty for managers where it matters most. Diginex Trust can help reduce uncertainty by adding an additional layer of integrity to your documents and processes. The product is aimed at high performing teams across multiple industries.

Features

Configurable Workflows

Bring existing workflows or configure new ones to fit in seamlessly alongside existing systems

Tamperproof document audit logs

Immutable history of all relevant interactions with your documents

Secure document sharing

Define recipients both within and outside the organization and share documents securely

Printable blockchain transaction records

Download, share and print all relevant blockchain related transaction data

Diginex Custom

We recognize that leading businesses have complex and unique needs when it comes to important processes and sensitive documents. That's why we leverage Diginex Trust capabilities in ways that make the most sense, delivering tailored blockchain enabled solutions targeted at specific problems.
