The MailVault Overview

Works with all email systems. On-premise, in the cloud and even in a hybrid mode. Available on Microsoft Windows and Linux.

Have a look at the big picture (literally), see the high-level benefits of using MailVault, understand how it works and the ease with which it can be deployed in an organization.

The Big Picture

The Features and Benefits of using MailVault

Download Feature Sheet

Here are some of the features and benefits, that make MailVault very easy to deploy and a joy to use.

Email systems compatibility

- Works with **all** standards-based email servers
- Microsoft 365, MS Exchange, Google Workspace (including Legacy / Free Edition), Lotus Notes, Zimbra, Icewarp, MDaemon, PostMaster, Postfix, Qmail, Sendmail and other SMTP, POP3 and IMAP mail servers.

Buy MailVault

MailVault pricing is based on user-license slabs. Our international users can purchase MailVault online – conveniently and securely. For users from India, we accept cheques and demand drafts too.

To know more about license usage, have a look at the **Purchasing FAQ**.

MailVault v5.2.1 released

MailVault v5.2.1 is available.

Hi folks, this was a little earlier than we expected.

It appears that while updating to v5.2.0 some GWS users **may** face a temporary configuration issue, which could be manually corrected. This release fixes that and we do apologize for any inconvenience caused.

You can read more about the v5.2.0 release here.

An **important note** for our users:

- **We've extended support for 32-bit systems to the v5.2.x series.**
- However, we strongly recommend that users deploy MailVault on 64-bit systems.

You can manually upgrade your MailVault installation by going to:
