

# Places Discovery Workshop

## AI-Powered Workplace

Over the last 18 months, two trends have reshaped all aspects of our work life: The normalization of flexible work and the rise of AI. Flexible work has allowed organizations to provide greater work/life balance to their employees and has forced an entire reevaluation of corporate real-estate and what the in-office experience will be. Generative AI has is transforming how work gets done by augmenting and amplifying our own capabilities. Microsoft Places harnesses the power of AI, and is a key part of the new AI-Powered workplace. It creates modern workplaces for flexible work that unlock coordination, modernization, and insight. With products across Copilot, Teams, and Places, customers can coordinate productively, modernize intelligently, and optimize effectively.

AI systems that are safe, secure, and trustworthy by design

### Coordinate productively

Improved coordination and booking across flexible workspaces

### Modernize intelligently

Modern workspaces that enhance meetings, collaboration, and experiences

### Optimize effectively

Optimize where work happens with management and planning insights

## Places Discovery Workshop

The Places Discovery Workshop will provide an overview of how Microsoft Places integrates into your Teams environment as well as Copilot. We'll demonstrate how it can help improve the coordination across groups and provide a reliable way for your organization to provide a flexible work workspace to your employees. Additionally, we'll discuss your current workplace environment and see how Places could help your organization modernize and optimize your experience.

## Workshop deliverables

- Reference materials on Microsoft Places
- A high-level evaluation of your existing environment
- Suggestions of next steps for your organization to move forward into the AI-Powered Workplace
